<sup>2</sup>Universitas Kristen Petra, Visual Communication Design Department, Siwalankerto 142-144, Surabaya, Indonesia

**Abstract.** Typography is one of core subject for second year students of Visual Communication Design Department. As a core subject, that commonly studies about fonts (alphabets) as one element in graphic design. Typography in the second semester (Typography 2) focuses on exploring a new typeface using typical softwares, and also applying it into an artwork, such as book cover, poster, print advertisement, etc. Usually, those artworks were only given just for in the class to evoke students' skill and sense of art. Last year, Typography 2 applied Service-Learning on this class for the first time. Students were divided into several groups, and ordered to make banners for street vendors in Surabaya city. This paper aims to determine the benefits obtained by participants of Typography 2 with service-learning method. In addition, to know the constraints faced as an evaluation of the implementation of the lecturing by using service-learning.

## 1 Introduction

### 1.1 Typography

Visual communication design is a field of science that studies how to deliver messages (especially visually) effectively in order to be understood by the target audience. Emphasis on the visual side is important, as well as a differentiator for visual communication design compared to other scientific fields. Therefore, visuals become an important aspect of learning in the design of visual communication. Graduates of visual communication design are required to understand and master the visual language, and have a good visual sensitivity according to the rules in the design.

One application of visual sensitivity in the design of visual communication is in the preparation of a composition. Composition or layout is one of the implementation of visual communication design that plays an important role in the delivery of messages visually. A composition or layout consists of various design elements, such as lines, shapes / fields, textures, images, colors, letters, etc. Each element has its own roles, which when combined

---

<sup>1</sup> Corresponding author: [xine\\_y@petra.ac.id](mailto:xine_y@petra.ac.id)

will support each other for the message to be delivered. In this case, visual sensitivity is required in looking at the design elements as well as feeling the design principles that make up a composition.

As described above, the letter is one of the constituent elements of a design composition, which has its own complexity. In terms of anatomy, the letters have body parts that affect the quality of the letters to be recognized (legibility). Typeface (typeface) is also able to affect the level of reading (readability) words or sentences, which ultimately affect the process of delivering the message. Letters also have psychological abilities that potentially support the impression you want to appear on a message, or in other terms, the letters have characters. In short, many things need to be learned about the letters as part of the design elements. Science field that studies the letters, including how to arrange and use them in the designs is called typography. Typography is also one of the core courses in the Visual Communication Design, taught in the first semester (Typography 1) and second semester (Typography 2). Essentially, the course of Typography 1 examines the basics of letters, the anatomy of the letters, the character of the letters, and the principles in typography. While Typography 2 is more of a development or exploration of the letters, such as creating a new letter (new typeface) and the application of letters in a composition.

## **1.2 Street vendors**

Street vendors or so-called PKL are small traders who sell on the roadside, generally mobile (move-not settled) due to limited capital. Gradually their way of selling is also evolving, as more and more customers approach, many of the vendors are permanent (semi-permanent) in a place or location using stalls or tables and chairs so that visitors can eat more comfortably. The characteristic of street vendors is the existence of banners are stretched to cover the front part of the stall. If the vendors have more money, both sides of the stall can be given additional banners. The other function of the banner as a shade from the heat and rain beside to inform the menus. As the years progressed, the originally humble fabric which was used to inform customers about the menus provided by the seller, the banner had become personality also serves as a sign or identity that distinguished one stall from the others.

Banners as one of the outdoor media generally consists of elements of letters and images. The process of arranging these elements into a single unity of harmony is called layout. In addition to become filler elements (letters and pictures), another element to consider is space or the size of the banner area. Rustan (2014) revealed, basically layout can be described as the arrangement of design elements in the surface area of the certain media to support the concept / message it carries. In this case, the banner is a medium to convey the concept or message about street vendors' marketing profile, for example the name of the shop and what is sold or offered at the stall. Wardani, Susandari, & Wahyurini (2013) in their research noted that the visual identity of vernacular on street vendors street vendors had the potential to encourage the tourism industry in Surabaya, as an attraction for local and foreign tourists. They observed the visual identity of street vendors in Surabaya (Indonesia) and Singapore. Their results showed that globalization had a significant impact on the design of visual identity and banners on street vendors, which were seen in the increasing use of digital printing, photography, digital illustrations, and free images from the internet. It actually threatened the vernacular and local content that became the uniqueness or peculiarity of the visual identity of street vendors stalls. This Wardani, Susandari, & Wahyurini's research showed the importance of visual identity on street vendors. This became one of the triggers of the topic design of street vendors banners as the study project in the Typography 2.

### **1.3 Service-Learning**

As one methods of learning, Hinck and Brandell (in Akpabio, 2012) defined the service-learning as a method that helped students to learn and grow through participation in services that meet the needs of society. According to Klink and Athaide (in Akpabio, 2012), especially in service-learning was the existence of educational experience where students moved to meet the needs of people and society while providing opportunities for students to learn and grow. In line with the above two opinions, Bringle and Hatcher (1996) argued that service-learning was an educational experience where students participated in community ministry and reflect on their involvement in such a way as to gain further understanding of discourse and appreciation of social needs, discipline and civic responsibilities. Based on the three opinions above can be seen the emphasis on the activities undertaken by students in the fulfillment of the needs of the community. Efforts to meet or answer the needs of the community would require the right strategy. In this case, the student must have sufficient scientific knowledge and sensitivity in order to apply the science as problem solving in real life. The reality faced will vary, depending on the situation and conditions at the time.

Final project on Typography 2 academic year 2015/2016 that implement real project in the form of redesign of banner of PKL was the implementation of service-learning. The students were assigned to look for the street vendors with a less attractive banner display in Surabaya. Furthermore students should meet the owner of the stall and offer assistance to redesign the banner of the stall to be more interesting. If the stall owner agreed, the student started to create an alternative banner of the stall design. During the process of making alternate banner designs there was the participation of supervisors and stall owners who had an impact on the design revision. Final approval of the final design to be realised was the street vendor decision. Upon final approval, students created an actual banner with selected designs. For that, students prepared the necessary equipment, such as fabric, paint, and brush. Only after equipment was available, students started sketching based on their designs, and paint with colour paints. After completion, the student handed the banner to the street vendor and helped them to install it.

This paper aims to determine the benefits obtained by students of Typography 2 from learning with service-learning method. In addition, to know the constraints which were faced as an evaluation of the implementation of the lecturing by using service-learning.

## **2 Method**

This study used qualitative methods, by collecting data from students' reflection on Typography 2 service learning project. The students' reflection consist of the learning they get and the obstacles or constraints. The writing of reflection is the final exam of the semester, so it is assumed that the students do the reflection well. For the purposes of this study, student reflection writing can be a fairly valid source of data.

## **3 Findings**

### **3.1 Benefits in Academic**

From a number of reflections written by students, it can be seen the benefits they get, especially in terms of typography and visual communication design, through service-learning activities designing street vendors' banner. Some of them are:

### *3.1.1 Understand the design process and principles in typography*

Typography 2 is a subject for the second semester of the Visual Communication Design department. As a core subject, students get theories and principles in making the typeface and apply it in a layout design. Through service-learning, students can learn about the design process and principles in typography directly, because the project they created is a real project. Here is some students' statement when making reflections on lessons related to the design process and typography they acquired:

From this typography service-learning, I also learned how the techniques of making banner from sketch thumbnail to painting process. I also learned how to make the typeface digitally. (Ivanajayadi, 2016)

Applying the principles of typography I have learned so far such as kerning, spacing, and others on the banner that I make. And better understand the usefulness of typography. (Tanta, 2016)

In making this life I learned about a good technique of designing a banner. Lots of things to make a concern. Starting from kerning, proportion, layout, creativity, etc. The most important things about a street vendor's banner is the ease of reading the typeface used, so that people can immediately understand the message that will be delivered. (Waworuntu, 2016)

I can understand more the anatomy of letters and can make letters more consistent so that in applying them to the street vendor's banner design, it looks more tidy and consistent. In addition, I also studied the character letters in accordance with the character of street vendors to be applied so that it can show the banner more suitable. (Christanti, 2016)

### *3.1.2 Learn to make the typeface fit the target market*

To understand the theory and principles of design as well as typography, students have been practicing only by creating fictitious designs, where their idealism can be poured as freely as possible to achieve the best results. But with the service-learning method where they have to create a real design for street vendors, they must pay attention to who the target market design will be. This is what they realize when doing banner design project for street vendors stalls, as some of the following students expressed:

From the learning service-learning Typography I learned a lot how to make the typeface in accordance with the target market, how to make the typeface in accordance with the chosen stall (Ivanajayadi, 2016).

Through this service-learning I learned that not every typeface matches every place and condition. For example, a beautiful and elegant typeface for writing in cafes is actually not desirable and not suitable for use in coffee shops. Precisely the simple typeface preferred by street vendors (Febrina, 2016)

### *3.1.3 Learn to create a design that is able to meet the client's wishes*

One of the important things in the world of work is how a designer is able to meet the client's desire in making the design. Often it goes against the designer's desires, so that the designer candidate needs to learn to suppress the personal desires and give priority to the client's wishes. The experience of this is certainly necessary so that the candidate designers can compromise with himself and be able to make the design acceptable to the client. Service-learning provides experience on this subject, like the expression of some of the following students:

Through this course I learned quite a lot, from how to interact and create a design that is in accordance with the wishes of the client. On the other hand, my perspective became wider. I am not only selfish to want to design as I want but I learned that my design is for clients so it must follow the client's taste so that it can satisfy the clients and try as much as possible the design can also be useful and effective. (Tammy, 2016)

Through this service-learning I am confronted directly with a client who has special requests, and I as a designer must be able to realize the demand of the client ... and not selfish or self-imposed. (Angelica, 2016)

Our group actually wants to design a banner with images to make it look better and interesting, but the owner of street vendors do not want any pictures, just writing. (Meliana, 2016)

#### *3.1.4 Gain enrichment of insight into other materials*

Generally, learning in typography only uses paper media and supporting tools such as a poster or watercolor paint. The task of making these street vendors' banner provide insight into other media, the fabric as one of the media that has different characteristics with paper, as well as supporting equipment such as wall paint which have very different characters with poster paint. It makes the students feel the experience of working with the media differently than usual. The experience of taste is quite important in sharpening sense as a designer.

In terms of science I got a science that I never get before that is painting on the fabric by using paint, drawing on the cloth. (Claudia, 2016)

I understand a lot and know the kind of fabrics and tools needed in making this street vendor's banner. (Tanta, 2016)

I learned a lot about painting techniques on fabrics. In contrast to how to paint on the wall or paper, because the consistency of paint should be really considered. If too liquid then the paint will be widened on the fabric fibers and will give the impression not tidy. Meanwhile, if too thick, it will appear thick impression and accumulate. (Seputra, 2016)

### **3.2 Benefits in Non-Academic Things**

In addition to academic benefits, learning with service-learning method also provides non-academic benefits. Often in general learning, non academic things are relatively difficult or even neglected in the intended purpose. In fact, the ability of non academic is

not less important with academic ability. It is seen in the world of work, many entrepreneurs and educators who complained about the lack of soft skills among college graduates (Schulz, 2008). Therefore, attention to non-academic ability of students should also be improved. Based on the reflection of the students, it can be seen that service-learning is also able to contribute non-academic benefits.

### *3.2.1 Got new experience and better perception than ever*

The background of a person (student) also influences how the person is behaving and acting. Often the attitude and actions of a person if not accompanied by a good understanding can make a person narrow-minded and even cause problems in community life. Experience of the new things can bring positive benefits in opening insights and perceptions that are not necessarily true so far. Here's a student statement on the subject:

Honestly, I have never visited a street coffee vendor before. So it was quite weird when I first visited this street vendor. Initially, I thought it would be hard to interact with the owner of street vendors, but it was very easy from the beginning when we offered to make up the whole process until it was executed easily. (Tammy, 2016)

### *3.2.2 Practice soft skills of students in communicating with clients*

In my opinion, being friendly and using polite language when interacting with street vendors is also important for the completion of this task. (Tammy, 2016)

I learned how to interact with older people and learn to understand their tastes. Incidentally the owner of the shop is an old woman named bu Darto. (Tanta, 2016)

### *3.2.2 Practice students soft skills to express their opinions well*

How should I be able to convince the stall owner to accept the work of our group, and I must learn how the owner wants the shop. I also train how to interact well with the outside community, how to express opinions and explain the design of our work to the owner of the stall until finally the stall owner agreed. (Ivanajayadi, 2016)

I also learned how to communicate well and intend to help people who can not afford to buy / replace their banner without offending or demeaning the person. (Tanta, 2016)

### *3.2.3 Emerge student empathy*

I also feel very happy and touched by the reaction of Mrs. Darto as the owner of the street vendor who is happy with our giving. I feel happy to make other people smile through my work. (Tammy, 2016)

Our group and I personally initially just felt it was our duty and obligation because of the duty of the lecturer. But ... I feel valuable lessons especially satisfaction when the moment is over and when the owner of the stall owner is happy and smiling at our work. In fact, as I passed the street vendor with my family and saw

our banner installed, I feel happy and glad to share with others even if it is just a banner but it turns out to mean for others. (Febrina, 2016)

I can interact with the vendor owner and understand the value of his simplicity. (Ivanajayadi, 2016)

#### *3.2.4 Emerge positive self-confidence through the design knowledge*

During the installation of street vendor's banner, I learned that in my knowledge of design study, we can give and serve the community through our work, and our work can be really useful, not just paintings that are hung in the name of beauty, but our work really used and very useful for those in need. And our work not only on the website or in the digital realm only, but also on the objects that almost every day we meet and we do not realize like the street vendors. (Tanta, 2016)

I feel happy when the owner of the street vendors receives our banner with pleasure, even keeping the goodies in good condition; I feel my own experience as a designer whose work is appreciated / well appreciated. (Nugroho, 2016)

#### *3.2.5 Practice to work together in a team*

I also learned to work together in groups, because as designers we need to be able to work together on teams to make our projects work. (Christanti, 2016)

Through this service-learning we learn to work together in teams. If there is no compact cooperation and no self-awareness of each individual, then the process of painting the course will be long and tiring. (Seputra, 2016)

### **3.3 Obstacles or Constraints Faced**

This task also faces obstacles in its implementation. Constraints that can be conveyed is the problem where the work of banners by students is very limited. The space available is very limited, and the room condition is also less than ideal for work with large media such as banners.

In the process, this task takes a long time, approximately one month. In those days, there are some street vendors who have replaced their banner with new ones, or moved locations even changed business or even closed. This is because the characteristics of street vendors are dynamic, tend to change in a short time. But on the other hand, some students complained about the time of a month is relatively short.

Another obstacle that is quite often encountered is the response back from the owner of the street vendor that tends to accept student design when asked his opinion. For example, when the student asked, the owner only answered "yes", "just up to you", or "I just accept it". Based on the findings of interviews with the owner, most of them feel very grateful to have made banners, so it is inappropriate to give input design according to their wishes.

Some students feel the type of business PKL that has been determined to make them less flexibility in making choices. The majority want to be given the freedom to seek and determine their own street vendor so they can conduct surveys and get a street vendor that is more suited to their wishes, because some of them rarely come and do not really know the existence of street vendors.

## 4 Conclusion

From the implementation of a banner design project with service-learning on this typography many benefits are obtained. Not only in terms of academic, but also non-academic benefits. When considered, the benefits of non academic obtained quite a lot, even more than academic benefits. Soft skills or non-academic skills are important and necessary in the workplace, so it is good if each teacher also gives attention to it by including it in one of the learning objectives. The way that can be done is through the service-learning.

Implementation of service-learning in one of the Visual Communication Design courses, namely Typography, provides the different type and enriches case study in design subject. It also provides an assertion that service-learning as a method of learning is very good and can be applied in courses or other subject areas.
