## **Message from Chairs**

It gives us great pleasure to write this message about the 2018 Fourth International Conference on Advances in Computing, Communication & Automation (ICACCA) that was held 26 – 28<sup>th</sup> October 2018 at the Taylor's University Lakeside campus in the city of Subang Jaya in Malaysia. This was the first International Conference organized by the School of Computing and IT at Taylor's University, Malaysia.

This is the fourth edition of the conference founding its origin from India and for the first time organized outside of India. The 2018 Fourth International Conference on Advances in Computing, Communication & Automation (ICACCA) is technically co-sponsored by IEEE Consumer Electronics Society Malaysia Chapter, and IEEE Poland Section Computer Society Chapter. The major sponsorship for this conference was from Taylor's University with other sponsorship from Configura Pacific Sdn Bhd., Malaysia, BAE Systems, INFOPRO Sdn Bhd, Malaysia, and Huawei Technology Malaysia Sdn Bhd.

The aim of this conference was to provide an international forum for the researchers from academic institutions, experts from academia and industry from different parts of the world interact, exchange ideas, and share the outcome of their research work and experiences. Towards this aim, the papers were concentrated on topics that broadly include High Performance Computing, Intelligent Control Systems, Advances in Communication, Network & Social Network Analysis, Artificial Intelligence and Image Processing, Cloud Computing, and Smart Ecosystems. We had received 109 submissions of which 54 papers were presented at the conference.

We thank all the reviewers, technical program committee members, paper authors, key note speakers, sponsors and volunteers who had contributed and participated in this conference.

Raja Kumar Murugesan, Taylor's University, Malaysia  
2018 ICACCA General Chair

David Asirvatham, Taylor's University, Malaysia  
ICACCA General Chair

# Conference Organization

## 2018 ICACCA

### Steering Committee

- Singh, S. N., MMM Technical University, Gorakhpur, India
- Ganzha, Maria, Warsaw University of Technology, Poland
- Patrice Boursier, Taylor's University, Malaysia

### General Chair (s)

- Rishiwal, Vinay, MJP Rohilkhand University, India
- Paprzycki, Marcin, Polish Academy of Sciences, Poland
- David Asirvatham, Taylor's University, Malaysia

### 2018 ICACCA General Chair

- Raja Kumar Murugesan, Taylors University, Malaysia
- Pramod Kumar, Krishna Engineering College, Ghaziabad, India

### International Advisory Committee

- Florence Sedes, University of Toulouse, France
- YacineGhamri-Doudane, University of La Rochelle, France
- Nicolas Spyrtatos, University of Paris South
- University of West of England, UK
- Mike Phillips, University of Wales Trinity Saint David, UK
- Ian Wells, University of Wales Trinity Saint David, UK
- Eric Tsui, Hong Kong Polytechnic University
- Stephane Bressan, National University of Singapore
- AsaneeKawtrakul, Kasetsart University, Thailand
- Jaime Caro, University of the PhilipinesDiliman
- Yuzuru Tanaka, Hokkaido University, Japan
- Sunil Kumar, San Diego University, San Diego, USA.
- Dharm Singh, Namibia University of Science and Technology, Namibia.
- Gaurav Bajpai, University of Rwanda, Rwanda.
- Arpan Kar, Indian Institute of Technology, Delhi.

- K V Arya, ABV-IITM, Gwalior, India.
- Shekhar Verma, IIT, Allahabad, India.
- S.C Sharma, IIT Roorkee, India.

#### **Technical Program Committee Chair**

- Thinagaran Perumal, Universiti Putra Malaysia

#### **Local Program Committee**

- **Finance:** Lim Eng Lye, Kiu Ching Chieh, Taylor's University
- **Publication:** Abdullah Gani, Aravind Chockalingam, Taylor's University
- **Publicity & Public Relations:** Goh Wei Wei, Sarfraz Nawaz Brohi, Thulasyammal Ramiah Pillai, Ibrahim Abaker Targio Hashem, Taylor's University
- **Program Schedule:** Azween Abdullah, Sanath Sukumaran, Sukhminder, Sagaya Sabestinal Amalathas, Taylor's University
- **Registration & Secretariat:** Sumathi Balakrishnan, Dini Oktarina Dwi Handayani, Sarojini Devi Nagappan, Sophea Prum, Taylor's University
- **Exhibition & Sponsorship:** Sharon Lim PuiVoon, NorhidayahHamzah, Gayathri Mageswaran, Lee Weng Ken, Taylor's University
- **Local Arrangements Committee:** Tee Wee Jing, Venantius Kumar Sevamalai, Noor Zaman, Taylor's University
- **Website:** Tan Ee Xion, Mohsen Marjani, Taylor's University

## **Technical Program Committee 2018 ICACCA**

- Abd Rahman Ramli, Universiti Putra Malaysia.
- Abdolreza Hajmoosaei, WelTec, New Zealand.
- Abdoulmohammad Gholamzadeh Chofreh, Brno University of Technology, Czech Republic
- Antoine Doucet, University of La Rochelle, France.
- Arockiam Lawrence, St Joseph's College of Tiruchirappalli, India.
- Arun Sharma, IGDTUW, New Delhi, India.
- Asem Kasem, Universiti Teknologi Brunei.
- Ashraf Osman Ibrahim, Universiti Teknologi, Malaysia.
- Azlan Osman, Universiti Sains Malaysia.
- Brajesh Kumar, MJP Rohilkhand University, India.
- Chiew Kang Leng, Universiti Malaysia Sarawak.
- Chong Yung Wey, Universiti Sains Malaysia.
- Chui Yew Leong, Catrino Sdn Bhd, Malaysia.
- D D Sharma, MJP Rohilkhand University, India.
- D I George Amalarethnam, Jamal Mohamed College, India
- Ejaj Ahmed, University of Malaya, Malaysia.
- Feybi Ariani Goni, Universiti Kebangsaan Malaysia.
- Ganesan Ramanan, Blu Corona Sdn Bhd, Malaysia.
- George Dharmaprakash Raj, Bharathidasan University, India.
- Ibrar Yaqoob, Kyung hee University, South Korea.
- J. Joshua Thomas, KDU University College, Penang, Malaysia.
- Jean-Loup Guillaume, University of La Rochelle, France.
- Kamran Soomro, University of the West of England, UK.
- Kashif Munir, University of Hafr Al Batin, Saudi Arabia.
- KC Santosh, University of South Dakota, USA
- M. Mehboob Yasin, King Faisal University, Saudi Arabia.
- Made Windu Antara Kesiman, Universitas Pendidikan Ganesha, Indonesia.

- Manish Prateek, UPES, Dehradun, India.
- Manjur Sayyad Kolhar, Prince Sattam bin Abdulaziz University, Saudi Arabia.
- Mohammed F.R. Anbar, Universiti Sains Malaysia.
- Mohammed Fakherldin, Jazan University, Saudi Arabia.
- Muhammad Fermi Pasha, Monash University, Malaysia.
- Muhammad Habib Ur Rahman, FAST-NUCES, Lahore, Pakistan.
- Muhammad Muzzamil Luqman, University of La Rochelle, France.
- Muneeba Memon, Indus University Karachi, Pakistan.
- Munesh Chandra Trivedi, Govt. Engineering College, Azamgarh, India.
- Narayanan Kulathuramaiyer, Universiti Malaysia Sarawak.
- Nowshath Kadhar Batcha, Asia Pacific University, Malaysia.
- Ong Sim Ying, University of Malaya, Malaysia.
- Phang Swee King, Taylor's University.
- Reza Parizi, Kennesaw State University, Georgia.
- Riyaz Ahamed, International University of Malaya-Wales.
- Ruchir Gupta, Department of CSE, IIIT Jabalpur, India.
- Sandesh Gupta, CSJM University, India.
- Sanjeev Kumar, HBTU, Kanpur, India.
- Sarsij Tripathi, Department of CSE, NIT Raipur, India.
- Sayan Kumar Ray, Manukau Institute of Technology, Auckland.
- Selvakumar Manickam, Universiti Sains Malaysia.
- Shankar Karuppayah, Universiti Sains Malaysia.
- Sinthu Janita Prakash, Cauvery College, India.
- Siow Chun Lim, Multimedia University.
- Siti Anom Ahmad, Universiti Putra Malaysia.
- Sonu Lamba, MITS Gwalior, India.
- Sudeep Tanwar, Nirma University, Ahmedabad, Gujarat, India.
- Sudhanshu Tyagi, G.B.Pant University and Technology, Pant Nagar.
- Supriyanto Praptodiyono, Universitas Sultan Ageng Tirtayasa, Indonesia.
- Tarar Sandhya, Gautam Budh University, India.

- Tariq Rahim Soomro, Institute of Business Management (IoBM), Pakistan.
- Thinaharan Ramachandran, Bosch, Malaysia.
- Upasna Vishnoi, Data Storage IC R&D, Marvell Semiconductor Headquarters, Santa Clara, CA.
- V. Vivek, Jain University, Bangalore.
- Vishal Gour, Govt. Engineering College, Bikaner, India.
- Vishal Goyal, Punjab University, Patiala, India.
- Vishal Kumar, BTKIT Dwarhat, India.

# **2018 Fourth International Conference on Advances in Computing, Communication & Automation (ICACCA)**

## **Table of Contents**

**Message from Chairs**

**Conference Organization**

**Technical Program Committee**

**Reviewers**

**Papers**

**1. Credit Card Default Prediction using Machine Learning Techniques**

*Yashna Sayjadah, Ibrahim Abaker Targio Hashem, Faiz Alotaibi and Khairl Azhar Kasmiran*

**2. Smart Agriculture Management System with Remote Sensing Technology for Corn**

*Sachin Kumar, Pooja Khanna and Haris Khan*

**3. Self-Service of Wi-Fi Switching Channel by Customer**

*Ahmad Tajuddin Samsudin, Mohd Syafarees Ishak, Rizal Helmy Basri and Aizulfaideen Hamim*

**4. Sentiment Analysis on Kto12 Program Implementation in the Philippines**

*Jocelyn Torio, Rosemarie Bigueras and Daniel Jr. Maligat*

**5. Augmented Reality Technology in Digital Advertising**

*Ching Chieh Kiu, Wei Liang Lee, Khai Wen Andrew Ng and Chung Wei Chan*

**6. Application of Steady-State Integral Proportional Integral Controller for Inner Dynamics Control Loop of Multi-rotor UAVs**

*Jun Jet Tai, Swee King Phang and Choon Lih Hoo*

**7. Characteristic Comparison Method to Identify Device Residential Gateway**

*Ahmad Tajuddin Samsudin, Syed Al Firdaus J Syed Ahmad, Mohd Syafarees Ishak, Khalil Huzairi Ahmad and Rosidah Alia*

**8. Data Warehouse Design and Implementation for Research Literature Mining**

*Tzi Yhi Choo and Hui Na Chua*

- 9. Examining Genetic Algorithm with Guided Search and Self-Adaptive Neighborhood Strategies for Curriculum-Based Course Timetable problem**  
*Junrie Matias, Arnel Fajardo and Ruji Medina*
- 10. Collaborative Environment with Application Virtualization (CEAV) for Upstream environment**  
*Monerah Al-Mekhlal and Khalid Al-Barti*
- 11. A hybrid trilateration and fingerprinting approach for indoor localization based on wifi**  
*Sher Khan Mari, Chu Kiong Loo and Hew Kim Loong*
- 12. A Study on the Methods to Identify and Classify Cyberbullying in Social Media**  
*Kristo Radion Purba, David Asirvatham and Raja Kumar Murugesan*
- 13. Social Network Influencers' Engagement Rate Algorithm Using Instagram Data**  
*Roy Hang Yew Ling, Syamimi Suhaidi, Prishtee Seewoosurn and Venantius Kumar Sevamalai*
- 14. Segmentation and Classification of Brain MR Images Using Big Data Analytics**  
*Mahboob Alam and Mohammad Amjad*
- 15. What is Generation Zs' Preferred Social Media Networks?**  
*Manimekalai Jambulingam, Jayamalar Francis and Magiswary Dorasamy*
- 16. Bpoint -tree: An Indexing Structure for Efficient Search in Data Retrieval**  
*Sufyan Almajali, Ghazi Al-Naymat and Ayah Atiyah*
- 17. Proposed Urban Travel Behavior Model to Promote Smart Mobility**  
*Nelvin Leow Xechung, Jayaraman Krishnaswamy and David Asirvatham*
- 18. A Sparse Low Energy Adaptive Clustering Hierarchy Method for Wireless Sensor Networks**  
*Yi Xu, Guiling Sun and Tianyu Geng*
- 19. Pre-Processing and Partition of Voice for Semi-Voice Authentication**  
*Pratik Mishra, Sumit Singh, Shubham Kumar Singh and Aparna Dixit*
- 20. Accelerating Bit-Parallel Approximate Matching On GPU Platforms For Small Patterns**  
*Keh Kok Yong and Hong Hoe Ong*

**21. Comparative Analysis of Context Based Classification of Twitter**

*Muhammad Salman Tiwana, Farooq Javeed, Ikram Ullah Lali, Hafsa Dar and Muhammad Bilal*

**22. A Case Study on Knowledge Management Implementation in the Banking Sector - Issues and Challenges**

*Sanath Sukumaran, Sagaya Sabestinal Amalathas, Casper Gihes Kaun Simon, Syed Mustapha Smfd, Ibrahim Hashem and Amira Farhanah Zulkifli*

**23. How to Efficiently Predict Dengue Incidence in Kuala Lumpur**

*Duc Nghia Pham, Tarique Aziz, Ali Kohan, Syahrul Nellis, Juraina Abd. Jamil, Jing Jing Khoo, Dickson Lukose, Sazaly Abu Bakar, Abdul Sattar and Hong Hoe Ong*

**24. A Study on Leveraging Blockchain Technology for IoT Security Enhancement**

*Syeda Mariam Muzammal and Raja Kumar Murugesan*

**25. Machine Learning: An Ethical, Social & Political Perspective**

*Gayathri Mageswaran, Sarojini Devi Nagappan, Norhidayah Hamzah and Sarfraz Nawaz Brohi*

**26. Emotion Recognition in E-Commerce Activities using EEG-based Brain Computer Interface**

*Vegnish Rao Paramesura Rao, Chamode Anjana Hewawasam Puwakpitiyage, Muhammad Syahir Amali Muhammad Azizi, Wee Jing Tee, Raja Kumar Murugesan and Muhammed Dzulkhiflee Hamzah*

**27. A comparison of Estimation Techniques for electrocardiogram classification**

*Oussama Khalil Raach, Thulasyammal Ramiah Pillai and Ibrahim Abaker Targio Hashem*

**28. Trust Network, Blockchain and Evolution in Social Media to Build Trust and Prevent Fake News**

*Wee Jing Tee and Raja Kumar Murugesan*

**29. Fake News on Social Media: Brief Review on Detection Techniques**

*Zaitul Iradah Mahid, Selvakumar Manickam and Shankar Karuppayah*

**30. Literature Survey: Statistical Characteristics of Google Cluster Trace**

*Norfazlin Rashid and Umi Kalsom Yusof*

**31. Authentication with Brainwaves: A Review on the Application of EEG as an Authentication Method**

*Muhammad Syahir Amali Muhammad Azizi, Chamode Anjana Hewawasam Puwakpitiyage, Vegnish Rao Paramesura Rao, Wee Jing Tee, Raja Kumar Murugesan and Muhammed Dzulkhiflee Hamzah*

- 32. Early Warning System for Academic using Data Mining**  
*Leo Santoso*
- 33. A Novel Watermarking Scheme to against Fake Node Identification Attacks in WSNs**  
*Van-Truong Nguyen, Trong-Minh Hoang, Van-Hau Bui and Thanh-Tra Nguyen*
- 34. Conserve and Reserve: A New Approach to Home Automation and Bill Management System**  
*Md. Shahriyar Kabir Rafi, Tasnuva Khan Dia, Zaid Farzan Chowdhury, Rashed Shelim and Muntasir Al Khaledunnabi*
- 35. CHARM: Adopting Digitalization in Community Health Assessment and Review on Mobile**  
*Wei Wei Goh, Li Yen Jane Wee, Ahmad Faisal Abdul Aziz and Yee Xuen Phua*
- 36. Data Mining Analysis on Student's Academic Performance through Exploration of Student's Background and Social Activities**  
*Ching Chieh Kiu*
- 37. Credit Card Fraud Detection Using Deep Learning Technique**  
*Thulasyammal Ramiah Pillai, Ibrahim Abaker Targio Hashem, Sarfraz Nawaz Brohi, Sukhminder Kaur and Mohsen Marjani*
- 38. Transparent Workflow System to Eliminate Biasness in Assessing Final Year Projects**  
*Sukhminder Kaur, Nisa Angelina, Stanley Sim Kar Hon, Mwale Ntambo, Sarfraz Nawaz Brohi and Ibrahim Abaker Targio Hashem*
- 39. Significance of Adopting Marketplace Technology in 3D Printing Sector**  
*Brandon Chin, Wei Wei Goh and Chun Hee Khor*
- 40. Abnormal Cervical Cell Detection using HoG Descriptor and SVM Classifier**  
*Sopheha Prum, Dini Oktarina Dwi Handayani and Patrice Boursier*
- 41. Middleware Power Saving Scheme for Mobile Applications**  
*N Z Jhanjhi, Fatimah Abdualaziz Almusalli, Sarfraz Brohi and Azween Abdullah*
- 42. Convolutional Neural Network for Pornographic Images Classification**  
*I Made Artha Agastya, Arief Setyanto, Kusri Kusri and Dini Oktarina Dwi Handayani*
- 43. Assessing Usability of Ubiquitous Systems Using Quality Model**  
*Norhidayah Hamzah, Gayathri Mageswaran, Sarojini Devi Nagappan and Suriayati Chuprat*

- 44. Smart Medicine Reminder Device For The Elderly**  
*Shawn Benedict Kumar, Wei Wei Goh and Sumathi Balakrishnan*
- 45. A Review of Ambient Intelligence Based Activity Recognition for Ageing Citizens**  
*Kevin Yeap Chen Keng, Liew Yu Hung, Kong Shien Nie, Sumathi Balakrishnan, Raja Kumar Murugesan and Goh Wei Wei*
- 46. IoT Based Smart Inventory Management System for Kitchen Using Weight Sensors, LDR, LED, Arduino Mega and NodeMCU (ESP8266) Wi-Fi Module with Website and App**  
*Sifat Rezwan, Wasit Ahmed, Mahrin Alam Mahia and Mohammad Rezaul Islam*
- 47. The Non-linearity Effect of High Power Amplitude on OFDM Signal and Solution to Solve by Using PAPR Reduction**  
*Ali Farzamnia, Tan Jia Min, Liau Chung Fan, Ervin Gubin Mounng, Manas Kumar Haldar*
- 48. Python based Portable Virtual Text Reader**  
*Hasan Zaman, Saif Mahmood, Sadat Hossain and Iftekharul Shovon*
- 49. Differential Quadrature Phase Shift Keying Modulation in Optical Fiber Communication - Modelling, Design, Case Implementation and Limitation**  
*Md Shahrukh Adnan Khan, Mirza Mursalin Iqbal, Khandaker Sultan Mahmood, Anjuman Ara Anee, Md. Sazzadur Rahman and Shoaib Mahmud*
- 50. An Advanced Technical and Parametrical Comparison of Satellites in Asia Region with Uplink EIRP (dB) Vs. Transmitting Antenna Configuration**  
*Munmun Akter, Md Shahrukh Adnan Khan, Khandaker Sultan Mahmood, Mirza Mursalin Iqbal and Aravind CV*
- 51. Learning Analytics in Universiti Teknologi Brunei: Predicting Graduates Performance**  
*Asem Kasem, Siti Nur Asyiqin Mohd Shahrin and Au Thien Wan*
- 52. Topic Modelling for Malay News Aggregator**  
*Weiyang Kok, Duc Nghia Pham, Chuan Hai Ngo and Hong Hoe Ong*
- 53. Fusing individual choices into a group decision with help of software agents and semantic technologies**  
*Konrad Ponichtera, Mikolaj Malkinski, Jan Sawicki, Maria Ganzha and Marcin Paprzycki*
- 54. An Internet of Things (IoT) solution framework for agriculture in India and other Third World countries**  
*Kumar Nalinaksh, Vinay Rishiwal, Maria Ganzha and Marcin Paprzycki*

# Early Warning System for Academic using Data Mining

Leo Willyanto Santoso  
Informatics Department  
Petra Christian University  
Surabaya, Indonesia  
leow@petra.ac.id

**Abstract**—Nowadays, student academic data in universities are very huge. However, the opportunity to manage the data is a knowledge that cannot be overlooked. Educational data mining is a current research field which uses data mining algorithms to transform large volumes of academic data into valuable knowledge capable of improving the educational processes and decisions. This research makes use of a set of three models. The first two models used the data obtained in the first year (first semester and second semester), to predict the academic success of the enrolled students, while the third model used the information available at the end of the first year to predict the academic performances of the students at the end of their study. At the same time, this work also intends to identify the factors that are most critical to these models. The results of this research paved way for the head of the school to identify students in need of more pedagogical support, as well as students with high probability of excelling in their studies. It could also allow them to focus their attention on the critical aspects, by implementing mechanisms that tackles students' difficulties.

**Keywords**—educational, data mining, student academic

## I. INTRODUCTION

Education plays an essential role for developing countries. It is the key to eradicating poverty, changing people, communities, and nations. The information system is one of the most recent education technology adopted by institutions of higher learning. This is the reason why many higher institutions are investing a lot of money to improve their academic information system [1]. Data warehouse, is another very common technology that supports data analysis and reports for academic institutions [2].

The amount of information stored in these systems makes them valuable, thereby, leading to the improvement of quality learning. Identifying students with the inability to achieve academic success early, especially within the first year of their academic study, enables such students to be supported.

This research, is therefore, aimed at creating models that can accurately identify students unable to achieve academic excellence during their first year, as well as those capable to having long term academic performances at the end of their studies.

The objectives of this research are as follows: (1). The designed system can easily classify students into groups: those who excel in their studies and those who do not. The exploration of these students' groups, gives an insight on the factors that determines the students' performances. (2) The proposed decision support system provides solutions on how to improve the quality of education by using the cutting edge technology.

The rest of the paper was organized as follows. Section 2 describes the existing literatures on the topic and some related works. Section 3 describes the methodology utilized in this research work. Section 4 provides the experimental evaluation and analysis of the results. Finally, Section 5 is the conclusion of this research.

## II. LITERATURE REVIEW

In this section we reviewed the existing literatures on the educational data mining and the academic successes in the institution.

### A. Educational Data Mining (EDM)

EDM deals with the use of data mining techniques by, tapping into the data stored therein, in order to extract meaningful information that can support the decision-making processes by enabling a better understanding of the students and their learning environments [3]. EDM easily identifies those factors responsible for students to either graduate or not graduate [4]. However, the results are dependent on the selected dataset.

Student model is defined as the representation of a their characteristics, state, intelligent quotient, motivation, meta-cognition and behaviors [3]. This model allows the educational software systems to adapt to the responses of students. Baker et al. focused on identifying frustrated [5].

Personalized learning environments are systems flexible to students' characteristics. They are closely related to the recommendation systems, and allows students achieve their educational goals [6].

The resource management systems can be improved by integrating the Data Mining tools and all works in the EDM. The essence is to allow the average user to be able to make use of such tools [7]. Pedagogical support revolves around identifying the most effective type of support for a given situation and group of students. Beck and Mostow associated a student's performance to the type of pedagogical support received [8].

Educational theories deals with its empirical analysis and phenomenon. In order to enable a deeper comprehension of the key aspects of these theories, Gong et al stated that there was a relationship between an individuals' self-discipline and the number of mistakes made by that person [9].

Prediction is defined as the determination of the value of an unknown variable using the values of known variables. The known variables are called predictors. Problems associated with prediction can be either be classified as unknown variable belonging to several pre-established classes, or as a regression whose objective is to predict the value of a continuous numerical variable [10, 11]. There are

several other algorithms predictions that can be used to predict the students' performances in their work, such as decision trees and Bayesian classifiers. [12, 13] detection of outliers in the EDM, is an inconsistent process. This helps to identify students who have slow learning processes and those students who are gifted. [14].

Students could be grouped according to their educational history and socio-demographic characteristics [15]. Clustering algorithms can sometimes be unclear, thereby, causing a variable to belong to more than one algorithm.

Relationship Mining is the identification of relationships between variables in large data sets [16]. This technique can identify the effective factors on responsible for a student to retake a course [17, 18].

### B. Data Mining Technique in Education

Different data mining techniques can be used to support the extraction of relevant information, although this could be dependent on the aim of the study. According to the objectives of this research, our analyses were focused on the classification and clustering techniques. In both cases, there was no consensus regarding the most appropriate technique to be used. According to the classification techniques, the performances of several algorithms were compared and the one with the best performance was found to be the IB1, the Nearest Neighbour algorithm [19]. On the other hand, Decision Trees and Bayesian Networks were used to predict the students' GPA at different points of their academic paths [12]. The Decision Trees consistently outperformed the Bayesian Networks in this task. Different algorithms were compared, and the Random Forest and Support Vector Machines were proven to have the best performances, with Naive Bayesian Networks generally surpassing the Decision Trees most especially when dealing with this imbalanced or discrete datasets [20].

There is a relationship between the classification problems and the set of predictors that produce the most accurate model. Oskuei and Askari focused on the gains of the performances by using sex, parents' level of education and welfare [21]. Pal and Saurabh Pal utilize a broader range of attributes, with certain aspects such as the admission type and the locations of both the students' residence and the college taken into consideration [19]. Meanwhile, Asif, Merceron and Pathan focused on the grades students obtained in certain courses [22].

## III. DESIGN AND METHODOLOGIES

The purpose of this research was to develop three different prediction models that address the student's academic performances. The first model deals with predicting the academic success in their first semester with the data available at the time of enrollment, while the second model uses the data available at the end of their first semester in order to predict his/her success at the end of the first academic year. The success of these models were defined according to the students who were able to complete at least 20 credits in a semester with a GPA of 3 or 4. For a student to get a total of 20 credits, he/she must attend lectures for a total of 20 hours every week. For the third model, a multinomial classifier was preferred. This model focuses on predicting the overall academic success of the student based on the data available at the end of the first year, hence

knowledge of the degree of success was considered important. For measuring this performance, the following formula was used:

$$Performance = \frac{\sum(G * C)}{\sum CE} \quad (1)$$

G represents the final grades the student obtained on their courses, C the number of credits those courses are worth and CE the total number of credits that they enrolled in. This allows us to take into account number of courses they passed and the grades they obtained in each of the courses.

The performance values gotten from the dataset were then submitted to a K-Means clustering algorithm, and this allowed us to congregate them into five groups. By analyzing these groups, we were able to define the performance value for five students. According to the information that was used to develop these models, the attributes consisted of academic information, such as enrollment grades, national exams taken, amount of credits completed on a given semester and the averages obtained, as well as demographic data, like a student's sex, their parents' education level and jobs, and whether he or she is a beneficiary of a scholarship.

In this research, four algorithms were chosen and used to build the three models, namely C4.5, Random Forest, Naive Bayes and Support Vector Machine. These algorithms were chosen due to their widespread use in data mining.

The algorithms themselves were encapsulated in a process that applied x-fold validation with 10-folds, meaning that the data was divided into 10 blocks; the model trained 9 of the blocks and carried out evaluation with the other one. The process was repeated 10 times, once for each of the different blocks. In the end, the average performance was used. This reduces the impact the selection of data for training and test sets has on the performance of the model.

For the performance itself, three different measures were used in the first two models: accuracy, area under curve (AUC) and specificity. In the first year, priority was given to identifying cases of unsuccessful students rather than successful ones, as these are the ones that needs the institutions support, specificity is more relevant in those cases than sensitivity, which prioritizes the identification of successful examples. The third model, deals with accuracy, sensitivity and precision.

## IV. DISCUSSION AND ANALYSIS

In order to understand the results obtained, it is important to understand the parameters used for them. In this regard, Random Forest used 100 trees with a K equal to approximately the square root of the total number of attributes, while C4.5 was developed as an unpruned tree.

For the SVM, a complexity constant of 1 was used, with a tolerance parameter of 0.001. Logistic models were also fitted into the SVM outputs, and this allowed for the calculation of the relevant AUC values. The Weka's implementation of the SMO changed the output values to the extremes without making use of this parameter. These parameters were used in all the three developed models.

The first model that was developed used the information available at the start of the student's first year to predict the

students' success at the end of their first semester. The features used in determining the model were: parent's education background, parent's job, enrollment option, enrollment stage, degree that the student enrolled in, high school average grade, enrollment exams average grade, enrollment average grade and enrollment exams.

As aforementioned, the data used for these models also underwent outlier detection and removal, with 2459 instances left. It's important to note, however, that this dataset was then subjected to oversampling, resulting in a total of 3145 instances.

The performance of the four algorithms for the 1<sup>st</sup> model can be seen in Table I.

TABLE I. PERFORMANCE OF FIRST MODEL

Algorithm	Accuracy	Specificity	AUC
RandomForest (I=100, K=4)	80.93%	94.01%	94.30%
J48	83.90%	85.60%	88.74%
Naive Bayes	78.12%	79.67%	85.23%
SVM	83.70%	88.11%	90.12%

From Table I above, we can see that the Random Forest and the SVM produces the best AUC, with the Random Forest having a very poor accuracy. Meanwhile, J48 has the highest accuracy and provides us with all the information regarding the attributes with the higher academic success. AUC curve for the 1<sup>st</sup> model can be seen in Figure 1.

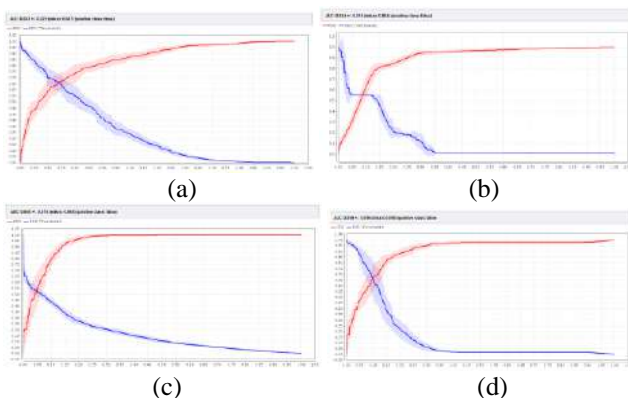

Fig. 1. AUC Curves for First Model . (a). Naive Bayes (b) J48 (c) RandomForest (d) SVM

The second model was developed using the information available at the end of the first semester of the student's first year. The attributes that remained in the model were: the parent's education background, parent's job, enrollment stage, degree that the student enrolled in, high school average grade, enrollment exams average grade, enrollment average grade, enrollment exams, number of college exams for approval, number of college exams for grade improvement, average grade on the first semester, and number of credits completed on the first semester.

Furthermore, the exception to the above list lies within the Random Forest algorithm, with the following attributes: school type, marital status, enrollment year, enrollment option and sex.

This data also underwent detection and removal, with 15 outliers removed, leaving us with a total of 2454 instances. After the resulting dataset underwent oversampling, we were left with a total of 3136 instances.

The performance of the four algorithms for the 2<sup>nd</sup> model can be seen in Table II. Moreover, AUC curve for the 2<sup>nd</sup> model can be seen in Figure 2.

TABLE II. PERFORMANCE OF SECOND MODEL

Algorithm	Accuracy	Specificity	AUC
RandomForest (I=100, K=5)	90.11%	94.39%	96.90%
J48	85.40%	94.19%	95.17%
Naive Bayes	85.12%	83.27%	89.57%
SVM	89.10%	91.03%	95.62%

Fig. 2. AUC Curves for Second Model . (a). Naive Bayes (b) J48 (c) RandomForest (d) SVM

In this model, Random Forest again produces the top results, while Naive Bayes remains the worst performing algorithm.

Lastly, the third model that was developed used the information available at the end of the student's first year to predict their success at the end of their degree year. This model also underwent feature selection, with the resulting attributes being: degree that the student enrolled in, high school average grade, enrollment average grade, enrollment exams, number of college exams for approval, average grade on the first semester, number of credits completed on the first semester, average grade on the second semester and number of credits completed on the second semester.

Outlier detection and removal were also performed on this model, with a total of 2459 left. This result is contrary to what was obtained in the previous two models.

Once again, the performance of the four algorithms for the 3<sup>rd</sup> model can be seen in Table III.

TABLE III. PERFORMANCE OF THIRD MODEL

Algorithm	Accuracy	Specificity	AUC
RandomForest (I=100, K=5)	96.41%	95.69%	96.80%
J48	91.60%	91.44%	91.72%
Naive Bayes	75.12%	73.71%	73.87%
SVM	92.10%	91.03%	91.82%

Random Forest continues to produce some of the best results out of the four algorithms, with a very high performance. J48 once again provides us with information regarding the attributes which have a higher weight in the academic success of students.

## V. CONCLUSIONS

In order to reduce the time required to complete a degree, universities need to be able to identify successful and unsuccessful students at the beginning of their academic career. For this purpose, three prediction models were developed: one that predicts success in the first semester with the data available at the time of enrollment, the second model predicts success in the second semester with the data that was available at the end of the first semester, and the third model predicted the overall academic success with the information available at the end of the first year.

With regards to all three models, the result of the work presented here is extremely positive. This analysis showed that the average entrance exams were attributed to the success of the students during their first semester. In the remaining two models, however, the information about the first and second semesters makes use of the average enrollment. Nonetheless, it is important to note that the information about the second semester can also replace that of the first semester, the entrance exams continue to have a big impact on all the three models. Due to lack of information, however, this analysis did not extend itself to which courses had the most predictive impact.

## ACKNOWLEDGMENT

This research was supported by The Ministry of Research, Technology and Higher Education of the Republic of Indonesia. Research Grant Scheme (No: 002/SP2H/LT/K7/KM/2017).

SCOPE

Proceedings of the IEEE provides in-depth review, survey, and tutorial coverage of the technical developments in electronics, electrical engineering, and computer science. Consistently ranked as one of the top journals by Impact Factor, it serves as a trusted resource for engineers around the world. The Proceedings publishes approximately ten special issues and two regular paper issues per year. -Special Issues are led by distinguished Guest Editor teams and contain articles, typically surveys, reviews or tutorials, from leading experts in the technology area being covered. They serve as a guide to state-of-the-art and are highly valued by the core research community, as well as specialists in other areas, looking to quickly come up to speed on the latest and more promising advances in areas outside of their own expertise. -Regular Issues consist of three to four papers on more focused topics, giving readers background and insight into emerging areas. Papers published in the Proceedings are usually reviews, surveys, or tutorials. -Reviews critically examine a technology, tracing its progress from its inception to the present—and perhaps into the future. -Surveys comprehensively view a technology—its applications, issues, ramifications, and potential. -Tutorial papers explain a technology and may give practical information for implementing it. These papers are written for the purpose of informing non-specialist engineers about a particular technology.

SJR shows this journal in Q1. What is the actual rank of this journal?

reply

**Melanie Ortiz** 1 year ago

Dear Sultan, thank you for contacting us.  
 For every journal, the annual value of the SJR is integrated into the distribution of SJR values of all the thematic categories to which the journal belongs. There are more than 300 thematic categories. The position of each journal is different in any category and depends on the performance of the category, in general, and the journal, in particular .  
 Best Regards, SCImago Team

Dear Kason,  
thank you for contacting us.  
Sorry to tell you that SCImago Journal & Country Rank is not a journal. SJR is a portal with scientometric indicators of journals indexed in Elsevier/Scopus.  
Unfortunately, we cannot help you with your request, we suggest you to visit the journal's homepage (see Scope) or contact the journal's editorial staff , so they could inform you more deeply. You can see the updated journal's information just above .  
Best Regards, SCImago Team
