Abstract

☐ Proceedings of **2019** the 9th International Workshop on Computer Science and Engineering, **WCSE 2019**

Sources: Proceedings of **2019** the 9th International Workshop on Computer Science and Engineering, **WCSE 2019**, 2020, Proceedings of **2019** the 9th International Workshop on Computer Science and Engineering, **WCSE 2019**, ISBN-13: 9789811416842; Conferences: **2019** 9th International Workshop on Computer Science and Engineering, **WCSE 2019**, June 15, **2019** - June 17, **2019**; Publisher: International Workshop on Computer Science and Engineering (**WCSE**)

Abstract: The proceedings contain 149 papers. The topics discussed include: a new neighborhood structure and its fast evaluation strategy in using iterated local search to solve single machine scheduling; gradsCOOL: a learning management system for Bulacan State University Graduate School; lost-min voting strategies for speeding up multi-SVMs; an improved frequent pattern mining algorithm based on TB-tree and tissue-like P system; a lightweight block cipher implementation in the resource - constrained Internet of things; network design for express package delivery service of electric vehicles; and performance analysis of the modified vigenere algorithm to secure data.

THE INFLUENCE OF INFORMATION INTEGRATION ON HOTEL PERFORMANCE THROUGH THE GREEN OPERATION AND STRATEGIC PURCHASING

Hotlan Siagian, Zeplin Jiwa Husada Tarigan, Fransisca Andreani

Abstract—Today, the tourism industry is one of the cores of the Indonesian economy. The growth of this industry has increased the number of a hotel located in the tourism place such as East Java of Indonesia. The rivalry among the hotel become unavoidable and even more intensified. On the other hand, the customer requirement has shifted to the environmental issue. Hence, the hotel's management has no choice other than to enhance the awareness of the management of environmental issues. This study examines the effect of information integration on hotel performance through strategic purchasing and the green operation. Data collection was performed by distributing 75 questionnaires representing 75 hotel. The respondents are the permanent employee involved in management levels such as supervisor or manager. The result suggested as follow: 1) The information integration affects the hotel performance, 2) The information integration influence the strategic purchasing, 3) The information integration affects the green operation, 4) The strategic purchasing influences the green operation, 5) The strategic purchasing affects the hotel performance, 6) The green operation affect hotel performance. The additional finding from this research can be drawn as follow: 1). Strategic purchasing mediates the effect of information integration on the hotel performance, 2). Green operation mediates the effect of information integration on hotel performance. The study provides an insight for the manager on how to enhance hotel performance from the point of SCM (Supply Chain Management).

NOTIFICATION LETTER

Dear Hotlan Siagian, Zeplin Jiwa Husada Tarigan and Fransisca Andreani,

Paper ID: W2028

Paper Title: The Influence of Information Integration on Hotel Performance through the Green Operation and Strategic Purchasing

Thanks for your support to ICITS 2019!

Review processes of 2019 The 7th International Conference on Information Technology and Science (ICITS 2019) has been completed. All submissions are peer-reviewed by conference committees. Based on the recommendations of the reviewers and the technical program committees, your **paper** has been accepted for **publication and presentation**. You are cordially invited to present the paper orally at ICITS 2019 to be held in Hong Kong from June 15-17, 2019.

After peer review, your submission identified above is recommended to be published in **conference proceedings**. Please finish your registration according to Registration Instruction.

REGISTRATION INSTRUCTION

In order to register the conference successfully, you must finish following **SIX** steps

1. Revise your paper according to the Review Form carefully
2. Format your paper according to the Template carefully.

<http://www.icits.org/download/Formatting-Full paper.doc>

3. Download and complete the Registration Form.

<http://www.icits.org/download/reg.docx>

4. Finish the payment of Registration Fee.

The information can be found in the Registration Form

5. Finish the Copyright.

[http://www.icits.org/download/WCSE Copyright.pdf](http://www.icits.org/download/WCSE%20Copyright.pdf)

6. Send your final papers (both .doc and .pdf format), filled registration form (.doc format), Copyright and the scanned payment (.jpg format) to icits@zhconf.ac.cn before **Apr. 05**, 2019.

Please strictly adhere to the format specified in the conference template while preparing your final paper. If you have any problem in preparing the final paper, please feel free to contact us via icits@zhconf.ac.cn. For the most updated information on the conference, please check the conference website at www.icits.org

Please make sure you have VISA or Mastered Card before clicking this link, and you should also calculate the right amount to pay. Please fill in the E-mail and Confirmation Number after payment.

Amount	E-mail	Order Number
\$ 600	zeplin@petra.ac.id	20190402-18131- 195458007865

2. PayPal

Account: pay@academic.net

For this, 30USD as handing fee will be charged. Please add it when you pay.

Please fill in your information after payment.

Amount	Payer's name	Payer's Account	Date	Order Number

3. Bank Transfer

Registration fee can be paid to the Organizing Committees through bank transfer. If you want to finish the payment by bank transfer, please require it from conference secretary.

Please fill in your information after bank transfer.

Amount	Remitter's Name	Date	Remitter's A/C No.

NOTE:

1. Payment by Method 1 is priority to accept.
2. If pay by method 3, please send a copy of bank remittance marked with "ICITS 2019+ your paper ID" to icits@zhconf.ac.cn
3. Registration can only be secured and confirmed when payment is received.
4. To avoid delays in registration, please read the entire form carefully. You may submit the following documents to icits@zhconf.ac.cn

1. Registration Form (doc.)- Named (paper ID-r), eg: A1001-r
2. Final Papers (doc. and pdf.)- Named (paper ID-f), eg: A1001-f
3. Copyright (pdf.)- Named (paper ID-c), eg: A1001-c

4. Payment Proof- Named (paper ID-p), eg: A1001-p

5. Student ID (student registration) – Named (Paper ID-ID card), eg: A1001-ID card

WCSE 2019 registration deadline is approaching!

wcse_general <wcse_general@zhconf.ac.cn>

Wed, May 8, 2019 at 5:57 PM

To: Hotlan Siagian <hotlan.siagian@petra.ac.id>

Dear authors

Thanks for your support to WCSE 2019^^

Congratulations that your submissions have been accepted by the conference.

Now, WCSE 2019 goes smoothly as expected and will be published by WCSE

May 10th is the final registration deadline, it is the final chance for you to join the conference in Hongkong

If you have much interests in this conference, please seize the final opportunity to join us

Send me your registration materials in advance so that we can prepare the conference materials such as certificate and conference program for you^^

If you need to pay by bank tranfer, please contact as for account details

Our online payment stytem has some changes, if you want to pay online, please pay by <http://confsys.iconf.org/online-payment/18131>

Looking forward to seeing you in Hongkong!

Ms. Ashily

Conference secretary

The Influence of Information Integration on Hotel Performance through the Green Operation and Strategic Purchasing

Hotlan Siagian¹⁺, Zeplin Jiwa Husada Tarigan², and Fransisca Andreani³

^{1,2,3} Petra Christian University, Surabaya, East Java, Indonesia

Abstract. Today, the tourism industry is one of the cores of the Indonesian economy. The growth of this industry has increased the number of a hotel located in the tourism place such as East Java of Indonesia. The rivalry among the hotel become unavoidable and even more intensified. On the other hand, the customer requirement has shifted to the environmental issue. Hence, the hotel's management has no choice other than to enhance the awareness of the management of environmental issues. This study examines the effect of information integration on hotel performance through strategic purchasing and the green operation. Data collection was performed by distributing 75 questionnaires representing 75 hotel. The respondents are the permanent employee involved in management levels such as supervisor or manager. The result suggested as follow: 1) The information integration affects the hotel performance, 2) The information integration influence the strategic purchasing, 3) The information integration affects the green operation, 4) The strategic purchasing influences the green operation, 5) The strategic purchasing affects the hotel performance, 6) The green operation affect hotel performance. The additional finding from this research can be drawn as follow: 1). Strategic purchasing mediates the effect of information integration on the hotel performance, 2). Green operation mediates the effect of information integration on hotel performance. The study provides an insight for the manager on how to enhance hotel performance from the point of SCM (Supply Chain Management).

Keywords: Strategic Purchasing, Green Operation, Information Integration, and Hotel Performance.

1. Introduction

The foreign tourists are people who visit a country outside their place of residence, which is driven by one or several needs without intending to earn income at the place visited. Domestic tourists also reported experiencing an increase from 58.07 million visitors in 2016 up to 58.67 million visitors in 2017 [1]. This growth of the visitor has naturally pushed the growth in the accommodation industry such as hotel, transportation, and culinary. The hotel provides service for the customer through the interaction between the provider and the customer. A report by the East Java Culture and Tourism Office indicated the number of 3-star, 4-star, and 5-star hotel amounted to 109 hotels in total. While in the year 2017, it increased to 117 hotels.

People are choosing the hotel for their need by considering several factors such as the location, price, and service quality and these factors become a competitive advantage of each hotel. Today, however, there has been increasing attention of the visitor to consider the environmental awareness of the hotel operation before deciding the choice. They prefer the hotel that operates in the way of environment-friendly. Environmentally friendly means that the hotel has paid attention to environmental sustainability in the hotel operation. Several operation aspects that reflect an environmental in a friendly way is the use of information technology, the application of green operation into daily practices and the implementation of strategic purchasing which procure material from the supplier which consider environmental sustainability. The green operation means that all employee has an orientation such as doing green purchasing, thinking about the environmental impact and pay attention to the safety and healthy work condition.

⁺ Corresponding author. Tel.: +62312983256
E-mail address: hotlan.siagian@petra.ac.id

However, the question raised is how the issue of information technology, strategic purchasing, and green operation improve the performance of the hotel. There have been several studies in the literature reporting examine the extent to which the hotel performance is affected by the application of information technology and the adoption of strategic purchasing and the green operation. Chen et al., [2] stated that information integration within an organization could support strategic purchasing because it can provide cost efficiency for hotels. Strategic purchasing must be supported by information integration so that the purchasing department gets detailed and complete information from the information system obtained by the purchasing department. Information integration can accommodate the overall operational needs of the hotel regarding material and supporting material requirements based on the requested by the users.

Today, hotels management have implemented an integrated information system which enables them to make changes quickly and precisely. Information technology in hotels can build a green operation because it can reduce paper use significantly, can reduce the use of hazardous materials and be able to use substances that are environmentally friendly substances [3]. Strategic purchasing built by the company can provide a green operation with strong partnerships with suppliers and long-term planning built. Hotel management should include the purchasing department in building a long-term hotel planning process to synchronize the primary and supporting material need through green purchasing practices. Green employees and green processes within the hotel need to be considered in depth to provide efficiency and effectiveness for the hotel. Green operations that have been carried out by the hotel should be able to contribute to improving hotel performance. The above description has shown that several studies have been performed to investigate the relationship of information integration, hotel performance, and strategic purchasing. So far, however, there has been little discussion about the effect of the green operation on the hotel performance and its relationship with information integration and strategic purchasing.

2. Theoretical Review

2.1. Hotel performance

Organizational performance for hotels is defined as the achievement of the organization in a certain period. Hotels always try to maintain the performance achieved, to be able to compete with other hotels. The hotel is always trying to make certain improvements and developments to be able to increase the benefits of the hotel. The hotel performance is divided into two categories, namely financial performance, and non-financial performance. Financial performance is measured by liquidity ratios, solvency ratios, activity ratios, and profitability ratios. Non-financial performance can be seen from hotel occupancy, some hotel occupancy, hotel user satisfaction, hotel service quality and hotel brand image [4]. This research measure the performance of hotels in conducting operations or nonfinancial performance using five indicators namely 1) the timely checking-in process, 2) the increased responsiveness to customers demand, 3) decreased customer complaints rate, 4) the improved of service quality, 5) the quick check-out process time.

2.2. Information integration

Information technology can provide information about the profile of the hotel resources and help employees carry out their work in the best performance. In the front-office of the hotel, information integration can be seen in the front some information such as the number of rooms filled, the number of rooms available, and the information that customers do through booking online systems [5]. Information integration is used in services and transactions with the customers in using the company's system. Hotels can use information integration to reduce operational costs associated with transaction costs resulting in increased company performance [6]. Similarly, the implementation of the information integration by the hotel also improve employee productivity and customer satisfaction [5]. Information technology in hotels can build a green operation because it can reduce paper use significantly, can reduce the use of hazardous materials and use environmentally friendly substances [3]. Hotels can reduce waste and use facilities and infrastructure that are friendly to the environment and use equipment repeatedly.

Another research by Chen et al., [2] stated that six integration within an organization could support strategic purchasing because it can provide cost efficiency. Strategic purchasing needs supported such as information integration in providing the purchasing department detailed and complete information about

what material or service to purchase. Information integration can accommodate the overall operational needs of the hotel regarding material and supporting material requirements based on the requested by the users and approved by hotel management. Strategic purchasing focuses on cross-functional communication and the relationship between the organization and the suppliers. On this study information integration defined as the extent to which the hotel has implemented the information integration and is assessed using four indicators: 1) data integration within the organization is running well, 2) reports are updated on time, 3) users can access on time, and 4) maintenance data can be done online. From the discussion three hypotheses:

H1: Information integration affects hotel performance.

H2: Information integration influence strategic purchasing

H3: Information integration affect the green operation

2.3. Strategic purchasing

Purchasing is a process to obtain the goods and services needed by the organization. The selection of the strategy or technique for the company to procure material and supporting material on an ongoing basis is called a purchasing strategy. Strategic purchasing orientation always focuses on critical suppliers and suppliers who can collaborate in the long term [7]. The indicator used in strategic purchasing in this study was to see whether the purchasing department's strategies were in line with the strategic goal set by the hotel management. The indicator used is purchasing is 1) purchasing involve in the strategic planning process, 2) purchasing department understands well the strategic objective, 3) purchasing department is part of the management team, and 4) purchasing department develop a long-term procurement planning. Strategic purchasing has a better impact on the company's system of integration with suppliers and can be valid for an extended period. The purchasing strategy has an impact on the company's operational performance with the value chain between buyers and suppliers [8]. Green purchasing is a company business in carrying out purchasing activities are carried out in support of environmental sustainability goals such as the use of goods with minimum waste, recycling, reuse and replacement of hazardous and toxic materials [9]. Hence, strategic purchasing will support the implementation of the green operation. The hypotheses are proposed:

H4: Strategic purchasing influence the green operation.

H5: Strategic purchasing affect hotel performance

2.4. Green operation

Green operation related to green purchasing is the purchase of materials that include reduction, reuse, and substitution of materials that are not environmentally friendly with environmentally friendly materials. The green operation system can also be used to monitor processes that are focused on environmental issues such as reduce paper, reduce the use of electricity, and use materials that can be recycled and reuse [10]. The green process is a production process or service that has minimal impact on the environment, occupational safety and health. Green processes always pay attention to internal conditions in the application of appropriate technology to achieve adequate process conditions in business value [11]. Green employee is an understanding of all members of the organization in thinking patterns, attitudes and actions that are environmentally friendly in carrying out activities and are always guided by occupational safety and health norms. Finally, green marketing is an activity about services provided to customers to provide customer satisfaction that does not have an impact on the environment. Dubey et al. [12] advised that manufacturing companies are needed to cooperate with raw material suppliers in producing environmentally friendly products. Because the company has the right as a customer of its suppliers, the organization has the authority to determine the criteria for environmentally friendly raw materials to be used. The indicator used to measure green operation is 1) the purchasing of the material focuses on green, 2) employees do work thinking about environmental, 3) employees do work paying attention, 4) the hotel focuses on green marketing, and 5) use technology information as an activity. Last revision, H6: Green operation influence the hotel performance

3. Research Method

The type of this research is an explanatory study which is used to carry out to examine the influence of one variable on other variables. The data collection was performed by using a questionnaire distributed to

various hotels in the East Java region. The population of this study is all hotel registered in the East Java culture and tourism service covering three stars, four stars, and five stars with the total number is 265 hotels. The number of samples is determined to a minimum of 45 hotels (greater than ten times the number of variables). Seventy-five questionnaires were distributed with the expectation that a minimum of 45 questionnaires obtained. The respondents are the permanent staff who have been in charge of the management such as supervisor and manager level as they are considered knowledgeable about the hotel operational process. The data analysis uses Partial Least Square (PLS) with Smart PLS version 3. The first analysis is to assess the measurement model (outer model) by evaluating the convergent and discriminant validity of each indicator and the reliability of the block indicators of each variable. The next step is to examine the structural model (inner model) through the assessment of the path coefficient together with its p-value or t-value. Table 1 lists the factor loading and cross loading of all indicators. Each indicator has a factor loading higher than the recommended minimum of 0.50 in all cases (range 0.653 to 0.873). Hence, all indicators are considered valid.

Table 1: Indicators factor loading and cross loading

Variable & Indicator	Factor Loading (bold) and Cross Loading				Validity
	X1	X2	X3	Y1	
Information Integration (X1)					
1. Data integration running well (X1.1)	0.695	0.258	0.441	0.533	Valid
2. Reports are updated on time (X1.2)	0.725	0.062	0.490	0.418	Valid
3. The user can access data on time (X1.3)	0.825	0.270	0.493	0.518	Valid
4. Maintenance data can be done online (X1.4)	0.729	0.318	0.488	0.677	Valid
Strategic Purchasing (X2)					
Purchasing depart. involve in the strategic decision (X2.1)	0.066	0.653	0.391	0.276	Valid
Purchasing depart. understand the Org. objective (X2.2)	0.272	0.708	0.396	0.446	Valid
Purchasing depart. is part of the management team (X2.3)	0.346	0.842	0.235	0.464	Valid
Purchasing depart. develop long term procurement (X2.4)	0.230	0.786	0.314	0.382	Valid
Green Operation (X3)					
Purchasing material focuses on green purchasing (X3.1)	0.411	0.211	0.708	0.539	Valid
Employees think about environmental impacts (X3.2)	0.554	0.424	0.873	0.661	Valid
Employees pay attention to safety and healthy (X3.3)	0.52	0.383	0.778	0.613	Valid
The hotel front-office focuses on green marketing (X3.4)	0.498	0.326	0.734	0.518	Valid
Hotel Performance (Y1)					
The timely checking of check-in linking (Y1.1)	0.403	0.342	0.621	0.694	Valid
The response to hotel customers is increasing (Y1.2)	0.430	0.524	0.508	0.711	Valid
The level of service complaints is decreasing (Y1.3)	0.573	0.435	0.488	0.801	Valid
The quality of hotel services is increasing (Y1.4)	0.569	0.288	0.643	0.685	Valid
The reported linkage checks out is the right time (Y1.5)	0.650	0.335	0.445	0.695	Valid

Table 1 also lists the indicators cross loading which indicates that each indicator has cross loading value higher with its construct than with others. It shows that all indicators are valid in term discriminant validity. Table 2 lists the value of reliability of the measurement model as shown by Cronbach Alpha (C/A), composite reliability (CR), Rho Alpha, and the Average Variance Extracted (AVE). Those variables have a value higher than 0.70 for C/A. C/R, Rho Alpha in all cases (range 0.733 to 0.857). While the value of AVE exceeded the recommended minimum value of 0.50 in all cases (range 0.516 to 0.602).

Table 2: Reliability of Measurement Model

Variable	C/A	rho_A	C/R	AVE	R ²
Information Integration	0.733	0.737	0.832	0.555	-
Strategic Purchasing	0.739	0.750	0.836	0.563	0.102
Green Operational	0.777	0.791	0.857	0.602	0.475
Hotel Performance	0.764	0.765	0.842	0.516	0.720

Those results demonstrated that the measurement model has good validity and reliability in all cases. Table 2 also demonstrated the value of R square. Inner model assessment using PLS does not directly calculate the goodness of fitness. The primary method used to assess the inner model is by considering the variance explained called R square. The Greater value of R² indicates a higher variance of the construct

explained by the independent variable. This value indicates the portion of the variance of the dependent variable explained by the independent variable.

4. Analysis and Result

The next analysis is to assess if the data support the hypotheses. The hypotheses are examined by assessing the t-value of each path coefficient which reflects the relationship of the construct.

Table 3: Path Coefficient and T-Statistic

Hypothesis	Original (O)	T Statistics	Remarks
Information Integration -> Strategic Purchasing (H1)	0.387	2.303	Supported
Information Integration -> Green Operational (H2)	0.558	4.775	Supported
Information Integration -> Hotel Performance (H3)	0.414	3.163	Supported
Strategic Purchasing -> Green Operational (H4)	0.320	2.070	Supported
Strategic Purchasing -> Hotel Performance (H5)	0.263	2.102	Supported
Green Operational -> Hotel Performance (H6)	0.231	2.615	Supported

Table 3 above shows the value of each path coefficient with its T statistic. For the significance level of 5% or *t-value* of 1.96, the results indicated that those path coefficients are positive with the T statistic value higher than 1.96 in all cases (range of 2.07 to 4.775). This result of analysis support and reinforce all the six hypotheses (H1 to H6). As all the hypotheses are supported, it also proves that strategic purchasing and the green operation mediate the relationship between information integration and hotel performance.

The primary goals of the present study are to investigate the effect of information integration on the hotel performance through the mediating role of strategic purchasing and the green operation. The results reinforce all the six proposed hypotheses. First hypotheses stated that information integration indeed affects the hotel performance. In the hotel management practice, this relationship is taking place mainly in the hospitality industry in the region of east java Indonesia. Information integration is reflected in the form of data integration across the department, on time data updating, data accessibility by the employee, and the maintenance of the data will improve the hotel performance. The main point in this finding is that data availability will enable proper and appropriate decision making in the sense of serving customer satisfaction and at the end improve the performance. Second hypotheses are also supported in this study. Information integration affects strategic purchasing [2]. The data integration across the department, on time data updating, data accessibility by the employee, and the maintenance of the data allow the purchasing department to establish an agreement with the supplier by hotel requirement and objective and develop an appropriate long-term procurement agreement.

Third hypotheses are stating that information integration influence the green operation is proved on this study. Information integration supports the organization to adopt the green operation into practice [3]. The use of information technology enables the operation of the hotel paperless. Elimination of the paper in the operation of the hotel is part of the green operation. The information integration also enables the hotel to communicate to the customer and the supplier without the use of the paper. The fourth hypotheses, which states that strategic purchasing affect the green operation is supported. The position of the strategic purchasing in the management team enable the purchasing department to select the supplier, which adopts environmentally friendly practices into their operational activity. Supplier holds an essential role in realizing the green operation and the strategic purchasing department should establish environmental awareness as one of the supplier criteria. The fifth hypotheses are stating that strategic purchasing influence hotel performance. It is clear, as the strategic purchasing focuses on the long-term agreement with the limited supplier, the company will benefit the cost efficiency from the material or service procurement, and at the end, improve the performance. This research supports the result of another research by Tarigan [13], which states the implementation of the innovation process enabling organizations to increase their operational performance.

The last hypotheses state that green operation affects hotel performance. Green operation adopts the paperless operation and replaced by the online information integration. Adopting the green operation enable the employee to practice environmentally friendly activity, and it is believed the customer will feel comfortable and enjoy the stay in the hotel. An exciting and notable finding from this study is the presence

of the mediating role of the strategic purchasing and green operation in the relationship of the information integration on the hotel performance. Information integration affects hotel performance indirectly through the green operation and strategic purchasing. When the hotel adopts the strategic purchasing and the green operation, the impact of information integration on the performance is greater due to the indirect influence.

5. Conclusion

The main finding can be summarized as follow: 1.the information integration affects the hotel performance, 2) the information integration influences the strategic purchasing, 3) the information integration affects the green operation, 4) the strategic purchasing influences the green operation, 5) the strategic purchasing affects the hotel performance, 6) the green operation affects the hotel performance. The additional finding from this research can be drawn as follow: 1). strategic purchasing mediates the effect of information integration on the hotel performance, 2), green operation mediates the effect of information integration on the hotel performance. This study provides an insight for the manager how to enhance the hotel performance from the point of view supply chain management. This study also makes several contributions to the current literature in supply chain management. This study focuses on the hospitality industry. Hence, it is recommended that further research is undertaken in the other area such as the manufacturing industry which use substantial hazardous material and often damaged environmental stability.
