Yes

Yes

**General Feedback and Comments (for Author):**

1. In writing the hypothesis, it is not necessary to use the significant, for example H4: Brand image has a significant impact on purchase intention, just like is: H4: Brand image has an effect on purchase intention
2. Table 4: Measurement items should be accompanied by a measure of the mean and variation standard deviation
3. Table 12: Summary of Social Media Marketing is not required if Table 4 already presents the mean and standard deviation

Yes

Is the coverage of the topic sufficiently comprehensive and balanced?

**General Feedback and Comments (for Author):**

- The topic is interesting but needs improvement before being considered for publication as follows.
1. The authors need to argue in the introduction why this research is important. What is the benefit of doing this research for the practical issue and theoretical
  2. No need to present Section 4.1. Outer model. Better directly go to 4.1 Validity and Reliability assessment. The same for other subsections as well
  3. Why the R square is not presented and elaborated? The goodness of fit using the PLS technique can use the predictive relevance (Q square). This is important to test the model. I suggested the authors explore the R square and Q square values.
  4. Table caption is not in order. After Table 4, followed by Table 9. It missed Tables 5/6/7, and 8.
  5. Table 9 is not referred to in the text. If it is not necessary, just delete it.
  6. This article is poor in English. It needs to be proofread in terms of grammar and wording

Good luck
