Note: Pemohon KUM memiliki ID 397

## Proceedings

ISSN: 2169-8767 (U.S. Library of Congress)

ISBN: 978-1-7923-6129-6

Papers will be added in the *IEOM Index* Publication Database, Full papers will be indexed in EBSCO.

### ID 002 **Managing the Crisis Condition in SMEs: A case study during the Covid-19 in West Java, Indonesia**

Iston Dwija Utama, Nur Azmi Karim, Rudy Aryanto, and Dian Kurnianingrum, Entrepreneurship Department, BINUS Business School Undergraduate Program, Bina Nusantara University, Bandung, West Java 40181, Indonesia

Meiliani Luckieta, Accounting Department, Harapan Bangsa Business School, Bandung, West Java 40132, Indonesia

### ID 003 **Using Association Rule to Analyze Hypermarket Customer Purchase Patterns**

Ivan Diryana Sudirman, Ronny Samsul Bahri, Iston Dwija Utama, Chyntia Ika Ratnapuri, Entrepreneurship Department, BINUS Business School Undergraduate Program, Bina Nusantara University, Bandung, West Java, 40181, Indonesia

### ID 004 **Comparing the Relationship of Tourist Attraction by Using Association Rule**

Ivan Diryana Sudirman, Dimas Yudistira Nugraha, Iston Dwija Utama, Tjia Fie Tjoe, Entrepreneurship Department, BINUS Business School, Undergraduate Program, Bina Nusantara University, Bandung, West Java, 40181, Indonesia

### ID 005 **Green Product Purchase Intention in Emerging Country: An UTAUT-2 Adoption**

Ivan Diryana Sudirman, Doni Purnama Alamsyah, Okky Rizkia Yustian, Iston Dwija Utama, Mulyani, Entrepreneurship Department, BINUS Business School Undergraduate Program, Bina Nusantara University, Bandung Campus, Bandung, Indonesia, 40181

### ID 006 **Flowshop Production Scheduling Using Cds, Tabu Search And Genetic Algorithm (Case Studies: Cv. Mega Abadi)**

Lina Gozali, Vania Eliyanti, Lamto Widodo, and Frans Jusuf Daywin, Industrial Engineering, Universitas Tarumanagara, Indonesia

Agustinus Purna Irawan, Mechanical Engineering, Universitas Tarumanagara, Indonesia

Harto Tanujaya, Industrial Engineering, Universitas Tarumanagara, Indonesia

Siti Rohana Nasution, Industrial Engineering, UPN Veteran, Jakarta, Indonesia

### **ID 390      Analysis of Workers' Physical and Mental Complaints in Conducting Online Meetings in the New Normal Era**

Deni Saputra, Furniture Industry Business Management Study Program, Furniture and Wood Processing Industry Polytechnic, Kendal, Indonesia

Merisha Hastarina, Industrial Engineering Study Program, University of Muhammadiyah Palembang, Palembang, Indonesia

### **ID 391      Kansei Engineering and Design Thinking Methodology for Product/Service Design**

Markus Hartono, Department of Industrial Engineering, University of Surabaya, Jalan Raya Kalirungkut, Tenggilis, Surabaya 60293, Indonesia

### **ID 392      Process Improvement of COVID-19 Vaccination System by utilizing Queuing Theory and ProModel Simulator on Vaccination Facilities in Metro Manila**

Jolly Ann J. Villaflores, Maria Ziziana A. Llegos, Unique Kate L. Guna, Mary Antonette F. Faminiano, Larianne D. Cruzado, Kyla R. Mendoza, Industrial Engineering Department, Technological Institute of the Philippines – Manila

Janina Elyse A. Reyes, Industrial Engineering Department – Adviser, Technological Institute of the Philippines

### **ID 394      Lean Six Sigma DMAIC Implementation to reduce Total Lead Time Internal Supply Chain Process**

Deri Maryadi, Student, Master of Industrial Engineering, Faculty of Engineering, Universitas Mercu Buana Jakarta, Jakarta, Indonesia

Bonivasi Prasetya Ichtiarto, Lecturer, Master of Industrial Engineering, Faculty of Engineering, Universitas Mercu Buana Jakarta, Jakarta, Indonesia

### **ID 395      Working Posture Improvement on Batik Coloring Process using Rapid Upper Limb Assessment Method**

Agatha Sola Gracia Christy, Adelia Vira Andhini, Sinta Wulandari, Industrial Engineering Major, Faculty of Engineering, Dian Nuswantoro University, Semarang, Indonesia

### **ID 396 A Strategy Design for Logistics Company: J&T Express Case Analysis Using Blue Ocean Strategy**

Agus Mansur, Department of Industrial Engineering Department Universitas Islam Indonesia, Yogyakarta, Indonesia

Naufal. G. Salsabil, Department of Industrial Engineering, Faculty of Industrial Technology, Universitas Islam, Indonesia, Yogyakarta, Indonesia

### **ID 397      Does it Pay to be Perfect? A Lesson Learnt from CV XYZ**

Christopher Hanjaya and Karina Agustin, International Business Engineering Program, Department of Industrial Engineering, Petra Christian, University, Surabaya, Indonesia

Hanijanto Soewandi, Lecturer, Department of Industrial Engineering, Vice President of Micro Strategy Technology Company, Towers Crescent Plaza Tysons Corner, VA 22182 USA

### **ID 398      Identification of At-Risk Behaviors among Fuel Station Consumers in Indonesia**

Aryo Wibowo, Doctor Candidate, Faculty of Public Health, Universitas Indonesia, Depok, Jawa Barat, Indonesia

Fatma Lestari and Robiana Modjo, Professor and Lecturer, Faculty of Public Health, Universitas Indonesia, Depok, Jawa Barat, Indonesia

## Committee

### Conference Committee

#### CONFERENCE CHAIRS:

**Dr. Ir. Wahyudi Sutopo, ST., M.Si, IPM**

Professor, Department of Industrial Engineering

Head of Industrial Engineering and Techno-Economics Research Group, Department of Industrial Engineering

Vice Dean for Human Resources, Finance, and Logistics

Faculty of Engineering

Universitas Sebelas Maret (UNS), Surakarta, Indonesia

President, IEOM Indonesia Chapter

**Professor Don Reimer, IEOM Fellow**

Director of Membership and Chapter Development – IEOM Society

President, The Small Business Strategy Group, Detroit, Michigan, USA

Adjunct Faculty – A. Leon Linton Department of Mechanical, Robotics and Industrial Engineering, Lawrence Technological University, Southfield, Michigan, USA

#### HONORARY CHAIRS

- Prof. Dr. Kuncoro Diharjo, S.T., M.T., Vice Rector for Research and Innovation, Universitas Sebelas Maret (UNS)
- Dr. techn. Ir. Sholihin As'ad, M.T., Dean, Faculty of Engineering Universitas Sebelas Maret (UNS)

#### PROGRAM CHAIRS

- Dr. Muh. Hisjam, STP, MT, Department of Industrial Engineering, Universitas Sebelas Maret
- Dwi Agustina Kurniawati, S.T., M.Eng., Ph.D, Department of Industrial Engineering, Universitas Islam Negeri Sunan Kalijaga, Yogyakarta, Indonesia
- Dr. Anak Agung Sagung Manik Mahachandra Jayanthi Mertha, ST, MSc, Department of Industrial Engineering, Universitas Diponegoro, Semarang, Indonesia

#### TECHNICAL CHAIRS

- Dr. Eng. Bobby Kurniawan, ST, MT, Department of Industrial Engineering, Universitas Sultan Ageng Tirtayasa, Serang, Indonesia
- Dr. Carles Sitompul, S.T., M.T., M.I.M., Department of Industrial Engineering, Universitas Parahyangan, Bandung, Indonesia

**GLOBAL ENGINEERING EDUCATION CHAIR**

- Assoc. Prof. Dr Syed Ahmad Helmi Syed Hassan, Associate Fellow, Center for Engineering Education (CEE), Universiti Teknologi Malaysia

**GLOBAL BUSINESS MANAGEMENT EDUCATION CHAIR**

- Dr. Imam Shofwan, Semarang State University, Indonesia

**INDUSTRY SOLUTIONS CHAIRS**

- Dr. Ahmad Syamil, CFPIM, CIRM, CSCP, Dean of Binus Business School, Bina Nusantara University, Jakarta
- Dr. Ir. Zaenal Muttaqien, SE., S.Pd., MT., IPM, AER, The board of industrial engineering chapter – the institute of Indonesian engineers (BKI-PII), Department of Industrial Engineering, Universitas Jenderal Achmad Yani, Bandung, Indonesia
- Dr. Basuki Rahmad, ST, MT, CEO – PT. Transforma Engineering & Solutions, Telkom University, Bandung, Indonesia

**WOMEN IN INDUSTRY AND ACADEMIA CHAIRS**

- Dr. Ir. Tiena G. Amran, IPU, AER, The board of industrial engineering chapter – the institute of Indonesian engineers (BKI-PII), Department of Industrial Engineering, Universitas Trisakti, Jakarta, Indonesia
- Prof. Nilda Tri Putri, S.T., M.T., Ph.D, Department of Industrial Engineering, Universitas Andalas, Padang, Indonesia

**PUBLICATION CHAIRS**

- Lina Gozali, S.T., M.M., Ph.D., Department of Industrial Engineering, Universitas Tarumanegara, Jakarta, Indonesia
- Mohammad Mi'radj Isnaini, S.T., M.T., Ph.D., Department of Industrial Engineering, Institut Teknologi Bandung (ITB), Bandung, Indonesia
- Dr. Mohammed Rahman, Central Connecticut State University, USA

**SPONSORS AND EXHIBITORS CHAIR**

- Professor Don Reimer, Lawrence Technological University, Southfield, Michigan, USA
- Dr. Naniek Utami Handayani, S.Si, MT, Department of Industrial Engineering, Universitas Diponegoro, Semarang, Indonesia

**COMPETITIONS CHAIRS****Undergraduate Student Paper Competition Sponsored by SIEMENS**

- Eko Setiawan, ST, MT, Ph.D., Head of Industrial Engineering Study Programme, Universitas Muhammadiyah Surakarta, Indonesia
- Dr. Ratna Purwaningsih, ST., MT., Head of Industrial Engineering Department, Universitas Diponegoro, Semarang, Indonesia

**Graduate Student Paper Competition Sponsored by EATON Corporation**

- Dr. Eng. Desto Jumeno, ST, MT, Head of Master Program in Industrial Engineering, Universitas Andalas, Padang, Indonesia

**Master Thesis Competition Chairs**

- Dr. Eko Pujiyanto, S.Si, MT, Head of Master Program in Industrial Engineering, Universitas Sebelas Maret, Surakarta, Indonesia
- Dr. Jafri Mohd. Rohani, University of Technology, Malaysia

#### Doctoral Dissertation Competition Chairs

- Nur Aini Masrurah, ST., M.Sc., Ph.D, Department of Industrial Engineering, Universitas Gadjah Mada (UGM), Yogyakarta, Indonesia
- Dr. Mehran Doulat, Center for Quality and Sustainability, School of Engineering and Advanced Technology, UTM Kuala Lumpur, Malaysia

#### Senior Capstone Design Project / FYP Poster Competition Chairs

- Fitra Lestari, Ph.D., Head of Industrial Engineering Study Programme, UIN Sultan Syarif Kasim, Indonesia
- Dr. M. Shamsuzzaman, University of Sharjah, UAE

#### Undergraduate Research Competition Chairs

- Dr. Eko Liquiddanu, ST, MT, Head of Industrial Engineering Study Programme, Universitas Sebelas Maret, Surakarta, Indonesia
- Dr. Singgih Saptadi, ST., MT, Head of Industrial Engineering Study Programme, Universitas Diponegoro, Semarang, Indonesia

#### Lean Six Sigma Competition Chairs

- Dr. Dra. Hennie Husniah, M.T., Dean, Faculty of Engineering, Langlangbuana University, Bandung, Indonesia
- Dr. Dra. Amelia Santoso M.T., Head of Master Program in Industrial Engineering, Universitas Surabaya, Surabaya, Indonesia
- Assoc. Prof. Dr. Adnan Hassan, University of Technology, Malaysia

#### Simulation Competition Chairs

- Nurhadi Siswanto, S.T., MSIE., Ph.D, Institut Teknologi Sepuluh November (ITS), Surabaya, Indonesia
- Dr. Rohaizan Ramlan, Universiti Tun Hussein Onn Malaysia

#### Supply Chain and Logistics Competition Chairs

- Dr. Eng. Erwin Widodo, ST, M. Eng, Institut Teknologi Sepuluh November (ITS), Surabaya, Indonesia
- Dr. Azanizawati Ma'aram; Universiti Teknologi Malaysia

#### Human Factors and Ergonomics Competition

- Ing. Novie Susanto, S.T., M.Eng, Department of Industrial Engineering, Universitas Diponegoro

#### Poster Competition Chairs

- Dr. Indri Hapsari, S.T., M.T., Head of Industrial Engineering Study Programme, Universitas Surabaya, Surabaya, Indonesia
- Dr. Henny, ST., M.T., Head of Industrial Engineering Study Programme, Universitas Komputer Indonesia, Bandung, Indonesia

### REGIONAL ACADEMIC COMMITTEE

- Prof. Dr. Bambang Suhardi, S.T.,M.T., Department of Industrial Engineering, Universitas Sebelas Maret, (Chair)
- Dr. Eng. R.B. Seno Wulung, Politeknik ATK Yogyakarta, Indonesia,
- Dr. Anugerah Widiyanto, B.Sc., M.Eng, Agency for the Assessment and Application of Technology, Serpong, Indonesia,
- Dr. Docki Saraswati, Industrial Engineering, Universitas Trisakti, Jakarta, Indonesia,
- Dr. Dwi Kurniawan, ST, MT, Department of Industrial Engineering, Institut Teknologi Nasional, Bandung, Indonesia,
- Dr. Ellysa Nursanti, ST, MT, Institut Teknologi Nasional, Malang, Indonesia,

- Dr. Eng Cahyono Sigit Pramudyo, M.T, Department of Industrial Engineering, Universitas Islam Negeri Sunan Kalijaga, Yogyakarta, Indonesia,
- Dr. Eng. Muhammad Rusman, Head of Industrial Engineering Department, Hasanuddin University, Makassar, South Sulawesi, Indonesia,
- Dr. Evizal Abdul kadir ST, M.Eng, Universitas Islam Riau, Pekanbaru, Indonesia,
- Dr. Gede Agus Widyadana, Industrial Engineering Department, Petra Christian University, Surabaya, Indonesia,
- Dr. Hari-Agung Yuniarto, Researcher in Maintenance and Quality System Engineering, Universitas Gadjah Mada (UGM), Yogyakarta, Indonesia,
- Dr. Ho Hwi Chie, Dean, Binus Aso School of Engineering, Bina Nusantara University (Binus), Tangerang, Banten, Indonesia,
- Dr. -Ing. Amalia Suzianti S.T., M.Sc.; Department of Industrial Engineering, Universitas Indonesia,
- Dr. Ir. R. Hari Setyanto, M.Si, Department of Industrial Engineering, Universitas Sebelas Maret
- Dr. Ishardita Pambudi Tama, Head of Industrial Engineering Department, Universitas Brawijaya, Malang, Indonesia,
- Dr. Lobes Herdiman, ST., MT, Department of Industrial Engineering, Universitas Sebelas Maret
- Dr. Mustofa, ST, MT, Politeknik STMI Jakarta, Indonesia,
- Dr. Paulina Kus Ariningsih, Industrial Engineering Department, Faculty of Industrial Technology, Parahyangan Catholic University (UNPAR), Bandung, West Java, Indonesia ,
- Dr. Rina Fitriana, ST, MM, IPM, Department of Industrial Engineering, Universitas Trisakti, Indonesia
- Dr. Sawarni Hasibuan, School of Industrial Engineering, Mercu Buana University, West Java, Indonesia,
- Dr. Subagyo, Associate Professor, Mechanical & Industrial Engineering Department, Universitas Gadjah Mada, Yogyakarta, Indonesia,
- Dr. Sugiono, Universitas Brawijaya, Kota Malang, Jawa Timur, Indonesia,
- Hari Prasetyo, Ph.D; Department of Industrial Engineering, Universitas Muhammadiyah Surakarta, Indonesia,
- Prof. Dr. Sudradjat Supian, Dean of Faculty of Mathematics and Natural Sciences (FMIPA), Universitas Padjadjaran, West Java, Indonesia,
- Prof. Ir. Moses Laksono Singgih M.Sc Ph.D, Institut Teknologi Sepuluh November (ITS), Surabaya, Indonesia,
- Winda Nur Cahya, S.T., M.Sc., Ph.D, Head of Magister Industrial Engineering, Universitas Islam Indonesia, Yogyakarta, Indonesia,
- Dr. Jupriyanto, ST, MT, IPU, Defense Industry Study Program, Indonesia Defence University,
- Gusti Fauza, S.T., M.T., Ph.D., Food Technology Study Program, Universitas Sebelas Maret, Indonesia
- Dr. Ir. Endah Retno Dyartanti, M.T., University Centre of Excellence for Electrical Energy Storage Technology, Universitas Sebelas Maret, Surakarta, Indonesia

## HONORARY COMMITTEE

1. Prof. Dr. Kuncoro Diharjo, S.T., M.T., Vice Rector for Research and Innovation, Universitas Sebelas Maret, (Chair),
2. Dr.techn.Ir. Sholihin As'ad, M.T., Dean, Faculty of Engineering Universitas Sebelas Maret
3. Professor Dr. Ir. Susy Susmartini, MSIE, Department of Industrial Engineering, Universitas Sebelas Maret (UNS),
4. Professor Dr. Eng. Agus Purwanto, S.T., M.T. , Universitas Sebelas Maret, Surakarta Indonesia,
5. Professor Dr. Ir. Abdul Hakim Halim, M. Eng, Department of Industrial Engineering, Institut Teknologi Bandung (ITB), Bandung, Indonesia,
6. Professor Dr. Ir. Budisantoso Wirjodirdjo, Institut Teknologi Sepuluh November (ITS), Surabaya, Indonesia,
7. Professor Dr. Ir. Sukaria Sinulingga, M. Eng, Department of Industrial Engineering Universitas Sumatera Utara, Medan, Indonesia,
8. Professor Dr. Ir. Yuri M. Zagloel, M.Sc. Eng, Department of Industrial Engineering, Universitas Indonesia, Jakarta, Indonesia,
9. Professor Dr. Mohd Razali Muhamad, Deputy Vice Chancellor (Academic and Internationalization), Universiti Teknikal Malaysia Melaka,
10. Professor Dr. Norazman Mohamad Nor, Deputy Vice Chancellor (Research and Innovation), National Defence University of Malaysia in Kuala Lumpur,
11. Professor Ir. Joniarto Parung, M.MBA.T., Ph.D., IPU, Universitas Surabaya
12. Professor Muhammad Nizam, S.T., M.T., Ph.D., Universitas Sebelas Maret, Surakarta Indonesia,
13. Professor Dr. Aries Susanty, ST, MT, Department of Industrial Engineering, Universitas Diponegoro, Semarang, Indonesia,
14. Prof.Dr. Mohd. Hasbullah bin Hj. Idris, Chair of School Mechanical Engineering, Faculty of Engineering, Universiti Teknologi Malaysia,

**ADVISORY COMMITTEE**

1. Professor Dody Ariawan, S.T., M.T., Ph.D., Vice Dean for Deputy Dean for Academic, Research and Student Affairs, Faculty of Engineering, Universitas Sebelas Maret, (Chair)
2. Professor Dr. Cucuk Nur Rosyidi, S.T., M.T., Department of Industrial Engineering, Universitas Sebelas Maret,
3. Dr. Muhammad Abid, Ghulam Ishaq Khan Institute of Engineering Sciences & Technology, Pakistan,
4. Dr. Olufemi Adetunji, University of Pretoria, South Africa,
5. Dr. Umar AL-Turki, King Fahd University of Petroleum and Minerals, Saudi Arabia,
6. Dr. Ronald G. Askin, Arizona State University, USA,
7. Dr. Mohammed Ben-Daya, King Fahd University of Petroleum and Minerals, Saudi Arabia
8. Dr. Abdul Talib Bon, Universiti Tun Hussein Onn, Malaysia,
9. Dr. Raj Das, University of Auckland, New Zealand,
10. Dr. Kudret Demirli, Khalifa University, Abu Dhabi, UAE,
11. Dr. Jose Arturo Garza-Reyes, University of Derby, UK,
12. Dr. Alireza Ghasemi, Dalhousie University, Halifax, NS, Canada,
13. Dr. Moncer Abdelhamid Hariga, American University of Sharjah, United Arab Emirates
14. Dr. Mohammad D. Al-Tahat, The University of Jordan, Amman, Jordan,
15. Dr. Arun Kumar, Royal Melbourne Institute of Technology (RMIT) University, Australia
16. Dr. Jay Lee, University of Cincinnati, USA,
17. Dr. Abu Masud, Wichita State University, Kansas, USA,
18. Dr. Charles Mbohwa, University of Johannesburg, South Africa,
19. Dr. Samar Mukhopadhyay, UWM, Milwaukee, WI, USA
20. Dr. Nor Hasni Osman, Universiti Utara Malaysia,
21. Dr. Leonard Perry, University of San Diego, USA,
22. Dr. Ho Thanh Phong, International University – VNUHCM, Vietnam,
23. Dr. Yassine Ouazene, University of Technology of Troyes, France,
24. Dr. Abdur Rahim, University of New Brunswick, Canada,
25. Dr. Mehmet Savsar, Kuwait University, Safat, Kuwait,
26. Dr. Rapinder Sawhney, University of Tennessee – Knoxville, USA,
27. Dr. Rosemary Seva, De La Salle University – Manila, Philippines,
28. Dr. Devdas Shetty, University of Hartford, Connecticut, USA,
29. Dr. Hamid Seifoddini, University of Wisconsin-Milwaukee, USA,
30. Dr. Masine Md. Tap, Universiti Teknologi Malaysia,
31. Dr. Zulkifli Mohamed Udin, Universiti Utara Malaysia,
32. Dr. Alok Verma, Old Dominion University, Norfolk, Virginia, USA,
33. Dr. Venkata Seshachala Sarma Yadavalli, University of Pretoria, South Africa,
34. Dr. Hari Agung Yuniarto, Universitas Gadjah Mada, Indonesia
35. Dr. Li Zheng, Tsinghua University, China,
36. Dr. Henk Zijm, Dutch Institute for Advanced Logistics, University of Twente, Netherlands
37. Dr. Devashis Mitra, Dean – Faculty of Business Administration, University of New Brunswick, Fredericton, Canada.
38. Dr. Hamidi Bashir, Chairperson, Department of Industrial and Engineering Management, University of Sharjah, UAE,
39. Dr. Hesham Kamal Al-Fares, King Fahd University of Petroleum and Minerals, Saudi Arabia,
40. Dr. Khaled S. Al-Sultan, King Fahd University of Petroleum and Minerals, Saudi Arabia,
41. Dr. Mohamed Essaaidi, Professor and Director (Dean), ENSIAS College of Engineering – Mohamed V University in Rabat, Morocco,
42. Ir. Lim Chye Ing, PhD, MSc, BEng, PEng, MIEM, PMP, Curtin University, Malaysia,
43. Dr. Ir. H. A. Dirgahayu Lantara, MT, IPU, Department of Industrial Engineering, Universitas Muslim Indonesia, Makassar, Indonesia,
44. Dr. Heri Setiawan, S.T., M.T., Department of Industrial Engineering, Universitas Katolik Misi Charitas
45. Dr. Ir. Eduart Wolok, ST, MT, Department of Industrial Engineering, Universitas Negeri Gorontalo, Indonesia,
46. Professor Dr. Noordin Mohd. Yusof, Faculty of Mechanical Engineering, Universiti Teknologi Malaysia

**GLOBAL ENGINEERING EDUCATION COMMITTEE**

1. Assoc. Prof. Dr Syed Ahmad Helmi Syed Hassan, Associate Fellow, Center for Engineering Education (CEE), Universiti Teknologi Malaysia (Chair),
2. Dr. Abu Masud, Wichita State University, Kansas, USA (Co-Chair),

3. Dr. Hamid Parsaei, Texas A&M University (College Station) and Texas A&M University, Qatar (Co-Chair),
4. Dr. Jafri Mohd Rohani, Universiti Teknologi Malaysia,
5. Dr. Grace Kanakana of Tshwane University of Technology, Pretoria, South Africa,
6. Dr. Achmad Basuki, ST., MT, Civil Engineering Department, Universitas Sebelas Maret,
7. Dr. Yosafat Winarto, ST, MT, Architecture Department, Universitas Sebelas Maret,
8. Dr. Muh. Hisjam, STP, MT, Industrial Engineering Department, Universitas Sebelas Maret,
9. Fitriani Imaduddin, S.T., M.Sc., Ph.D, Mechanical Engineering Department, Universitas Sebelas Maret
10. Dr. Joko Waluyo, ST., MT, Chemical Engineering Department, Universitas Sebelas Maret,
11. RR. Ratri Werdiningtyas, S.T., M.T., Ph.D, Regional Urban Planning Department, Universitas Sebelas Maret,
12. Dr. Eng Faisal Rahutomo, ST., M.Kom. Electrical Engineering Department, Universitas Sebelas Maret

## PROGRAM COMMITTEE

1. Dr. Ahad Ali, Director, Bachelor of Science in Industrial Engineering (BSIE); Director, Master of Science in Industrial Engineering (MSIE); Director, Smart Manufacturing and Lean Systems Research Group (Chair),
2. Dr. Eng. Boby Kurniawan, ST, MT, Department of Industrial Engineering, Universitas Sultan Ageng Tirtayasa, Serang, Indonesia,
3. Dr. Carles Sitompul, S.T., M.T., M.I.M., Department of Industrial Engineering, Universitas Parahyangan, Bandung, Indonesia,
4. Dr. Dwi Kurniawan, ST, MT, Department of Industrial Engineering, Institut Teknologi Nasional, Bandung, Indonesia,
5. Dr. M. Khadem, Sultan Qaboos University, Muscat, Oman,
6. Dr. Abdul Talib Bon, Universiti Tun Hussein Onn Malaysia
7. Dr. Rushan Ziatdinov, Department of Industrial & Management Engineering, Keimyung University, Daegu, South Korea,
8. Dr. Lina Aboueljinane, Industrial Engineering Program, École Nationale Supérieure des Mines de Rabat (ENSMR), Morocco,
9. Dr. Bouloiz Hafida, Industrial Engineering Department, National School of Applied Sciences (ENSA), Ibn Zohr University, Agadir, Morocco,
10. Dr. Jaouad Boukachour, Université Le Havre, France.
11. Dr. Denni Kurniawan, Universiti Teknologi Brunei, Brunei Darussalam
12. Dr. Norizah Bt Hj Redzuan, PhD, Universiti Teknologi Malaysia, Malaysia

## Industry Solutions Committee

1. Dr. Ahmad Syamil, CFPIM, CIRM, CSCP, Dean of Binus Business School, Bina Nusantara University, Jakarta,
2. Dr. Ir. Zaenal Muttaqien, SE., S.Pd., MT., IPM, AER, The board of industrial engineering chapter – the institute of Indonesian engineers (BKI-PII), Department of Industrial Engineering, Universitas Jenderal Achmad Yani, Bandung, Indonesia,
3. Dr. Basuki Rahmad, ST, MT, CEO – PT. Transforma Engineering & Solutions; Telkom University, Bandung, Indonesia,
4. Dr. Anwar Hossain, Daikin Applied, Minneapolis, Minnesota, USA,
5. Ihfasuziella Ibrahim, Construction Research Institute of Malaysia (CREAM)
6. German Moya, President at IEEE Costa Rica Section, Costa Rica,
7. Rina Wiji Astuti, ST, MT, CEO – PT. Batex Energi Mandiri, Surakarta, Indonesia
8. Dr. Susanto Sudiro, PT Mega Andalan Kalasan, Yogyakarta, Indonesia.

## Women in Industry and Academia (WIIA) Committee

1. Prof. Nilda Tri Putri, S.T., M.T., Ph.D, Department of Industrial Engineering, Universitas Andalas, Padang, Indonesia,
2. Dr. Ir. Tiena G. Amran, IPU, AER, The board of industrial engineering chapter – the institute of Indonesian engineers (BKI-PII), Department of Industrial Engineering, Universitas Trisakti, Jakarta, Indonesia,
3. Dr. Adibah Shuib, Faculty of Computer and Mathematical Sciences, Universiti Teknologi MARA, Malaysia,
4. Dr. Chan Chee-Ming, Associate Professor and Deputy Dean (Academic and Research), Universiti Tun Hussein Onn Malaysia,
5. Dr. Ellysa Nursanti, ST, MT, Institut Teknologi Nasional, Malang, Indonesia,
6. Dr. Funda Sivrikaya Şerifoğlu, Bilgi University, Istanbul, Turkey,
7. Dr. Ilham Kissani, Faculty of Engineering & Management Science, Al Akhawayn University, Ifrane, Morocco,
8. Dr. Mey Goh, Assoc Professor in Product Design, Loughborough University, UK,

9. Dr. Naniek Utami Handayani, S.Si, MT, Department of Industrial Engineering, Universitas Diponegoro, Semarang, Indonesia
10. Dr. Vanajah Siva, Chalmers University, Sweden,
11. Ir. Bertha Maya Sopha, S.T., M.Sc., Ph.D., IPM, ASEAN Eng., Universitas Gadjah Mada (UGM), Yogyakarta, Indonesia,
12. Prof. Soumaya Yacout, École Polytechnique de Montréal, Canada,

## TECHNICAL COMMITTEE / REVIEWERS

- Dr. Javad Khamisabadi, Islamic Azad University, Tehran, Iran,
- Dr. A.O. Adewumi, University of KwaZulu-Natal, South Africa,
- Dr. Abdelaziz Berrado, The Ecole Mohammadia d'Ingénieurs (EMI), Rabat, Morocco
- Dr. Aidin Delgoshaei, Industrial Engineering Department, Kharazmi University, Tehran, Iran
- Dr. Abderrahmane Mellak, University of Boumerdes, Algeria,
- Dr. Abdollah Aghaie, K.N. Toosi University of Technology, Iran,
- Dr. Abdul-Rahman Al-Ali, American University of Sharjah, United Arab Emirates,
- Dr. Abdussalam Shibani, Coventry University, UK,
- Dr. Ahmed Kadhim Hussein, Babylon University, Iraq,
- Dr. Amir Azizi, Universiti Malaysia Pahang, Malaysia,
- Dr. Andi Cakravastia, ST, MT, Institut Teknologi Bandung, Indonesia,
- Dr. Anwar, Universitas Malikussaleh, Aceh, Indonesia,
- Dr. Arun N. Nambiar, California State University – Fresno, USA,
- Dr. Balan Sundarakani, University of Wollongong in Dubai, UAE,
- Dr. Behnam Bahrami, Eastern Mediterranean University, Famagusta, Cyprus,
- Dr. Bhuvnesh Rajamony, University Malaysia Perlis (UniMAP), Malaysia,
- Dr. Brigitte Jaumard, Concordia University, Canada,
- Dr. Carles Sitompul, S.T., M.T., M.I.M., Universitas Parahyangan, Bandung, Indonesia.
- Dr. Cecilia Nembou, Divine Word University, Papua New Guinea,
- Dr. Faieza Abdul Aziz, Universiti Putra Malaysia, Selangor, Malaysia,
- Dr. Fernando González Aleu, Departamento de Ingeniería, Universidad de Monterrey, Mexico,
- Dr. Francis Leung, City University of Hong Kong, China,
- Dr. Fulufhelo Masithulela, University of South Africa, Johannesburg, South Africa,
- Dr. Gopalan Srinivasan, University of New Brunswick, Canada,
- Dr. Haider Ali Biswas, Khulna University, Bangladesh,
- Dr. Hui-Ming Wee, Chung Yuan Christian University, Taiwan,
- Dr. Indra Gunawan, The University of Adelaide, Australia,
- Dr. Ing. Novie Susanto, ST, M. Eng, Universitas Diponegoro, Indonesia,
- Dr. Ir. Rakhma Oktavina, MT, Universitas Gunadarma,
- Dr. Ir. Rosnani Ginting, MT, Universitas Sumatera Utara, Medan, Indonesia,
- Dr. Jahara bint Ghani, UKM, Malaysia,
- Dr. Jayakanth Srinivasan, MIT Sloan School of Management,
- Dr. Kannan Govindan, University of Southern Denmark, Denmark,
- Dr. Kondo H. Adjallah, Paul-Verlaine University, France
- Dr. Lamto Widodo, ST., MT, Universitas Tarumanegara, Jakarta, Indonesia
- Dr. Linda L. Zhang, IESEG School of Management, Lille-Paris, France,
- Dr. Mahdi Bashiri, Shahed University, Iran
- Dr. Mahmood Shafiee, Cranfield University, Bedfordshire, United Kingdom
- Dr. Maruf Hasan, University of New South Wales, Australia
- Dr. Md. Abdus Samad Kamal, Gunma University, Kiryu, Japan
- Dr. Md. Mamun Habib, Independent University, Bangladesh
- Dr. Md. Mizanur Rahman, Universiti Malaysia Sabah (UMS), Kota Kinabalu, Sabah, Malaysia,
- Dr. Mehran Doulat, Center for Quality and Sustainability, School of Engineering and Advanced Technology, UTM Kuala Lumpur, Malaysia,
- Dr. Meilita Tryana Sembiring, ST, MT, Universitas Sumatera Utara, Medan, Indonesia
- Dr. Michael Mutingi, University of Botswana, Botswana
- Dr. Miguel Sanz Bobi, Comillas Pontifical University, Spain
- Dr. Mohammad Ishak Desa, Universiti Teknologi Malaysia, Johor Bahru, Malaysia
- Dr. Mohd Abdur Rashid, University Malaysia Perlis (UniMAP), Malaysia,

- Dr. Murat Caner Testik, Hacettepe University, Ankara, Turkey,
- Dr. Nani Kurniati, Institute of Technology Sepuluh Nopember (ITS), Surabaya, East Java, Indonesia
- Dr. Naniek Utami Handayani, S.Si, MT, Universitas Diponegoro, Semarang, Indonesia.
- Dr. Nejib Chouaibi, Polytechnic School of Tunisia, Tunisia,
- Dr. Norhamidi Muhamad, UKM, Malaysia,
- Dr. Norzaidahwati Zaidin, Universiti Teknologi Malaysia, Johor, Malaysia,
- Dr. Nubia Milena Velasco Rodriguez, Universidad de Los Andes, Colombia,
- Dr. Omar Elmabrouk, Benghazi University, Libya,
- Dr. P. Sanjeevikumar, CTIF Global Capsule, Aarhus University, Denmark
- Dr. Raja Kothandaraman, Alpha College of Engineering, Chennai, Tamilnadu, India,
- Dr. Raja Zuraidah Raja Mohd Rasi, Universiti Tun Hussein Onn Malaysia,
- Dr. Ramy Harik, University of South Carolina, USA,
- Dr. Rashmi Jha, Gitarattan International Business School (GIBS), Affiliated to Guru Gobind Singh Indraprastha University, New Delhi, India.
- Dr. Ratri Parida, National Institute of Construction Management and Research (NICMAR), Pune, Maharashtra, India,
- Dr. Ravi Gor, St. Kabir Institute of Professional Studies, Ahmedabad, India,
- Dr. Rina Fitriana, ST, MM, IPM, Department of Industrial Engineering, Universitas Trisakti, Indonesia
- Dr. Rodrigo Garrido, Universidad Adolfo Ibaez, Chile,
- Dr. Ruchi Mishra, Institute of Management, Nirma University, Ahmedabad, India,
- Dr. Salah Haridy, Department of Industrial Engineering and Engineering Management, University of Sharjah, Sharjah, UAE,
- Dr. Sarbjit Singh, National Institute of Technology, Jalandhar, Punjab, India,
- Dr. Sawat Pararach, Thammasat University, Thailand,
- Dr. Shahrul B. Kamaruddin, Universiti Sains Malaysia,
- Dr. Shahryar Sorooshian, University Malaysia Pahang, Malaysia,
- Dr. Suat Kasap, Industrial Engineering, American University of the Middle East, Kuwait,
- Dr. Suhaiza Hanim Zailani, University Malaya, Malaysia,
- Dr. Syed Asif Raza, Qatar University, Qatar,
- Dr. T. Ramayah, School of Management, Universiti Sains Malaysia,
- Dr. Tanika D Sofianti, Industrial Engineering Dept., Engineering Faculty, Swiss German University BSD City Kav. Tangerang, Banten, Indonesia,
- Dr. Theodore B. Trafalis, University of Oklahoma, USA,
- Dr. Titah Yudhistira, ST, MT, Institut Teknologi Bandung, Indonesia,

## **Abstract**

E-commerce provides an excellent opportunity to increase the company revenues, especially during the COVID-19. Many features that appear in the E-commerce platform can influence the customer purchase intention. Therefore, most companies strive to achieve the highest maximum Star-rating that serves as the electronic version of word of mouth. CV XYZ expects to increase the 5-Star-rating count by creating the after-sales service program. However, does it pay to be perfect? By collecting Star-rating data from six online stores across three different online marketplaces organized by CV XYZ, we develop simple Statistics to a more sophisticated Markov Chain and Regression to analyze the data. The result shows that the distribution movement of Star rating before and after implement the program is not significantly different. However, the after-sales service program greatly improved the average daily Sales around IDR 31M (p-value for the T-test = 0.0039). By simply using Pearson Correlation analysis, we found a negative correlation between Sales and Star-Rating counts that encounter us in the “too good to be true” phenomenon. Therefore, it is more critical for the company to figure out an optimal number of 5-Star ratings achieved to maximize Sales than only focus to achieve the highest 5-Star ratings.

## **Keywords**

After-sales service, Star-rating, Sales, Statistics and Markov Chain.

## **1. Introduction**

E-commerce is becoming one of the essential tools that people need during this digital era. It offers a new medium where people could do transactions through the internet and online platforms (Syazali et al., 2019). The number of e-commerce users keeps increasing, especially during this COVID-19 pandemic situation, where people need to limit social activities. Due to this limitation, online shopping becomes one of the media for consumers to satisfy their needs (Koch et al., 2020). Based on the data retrieved from katadata.com, more than 200 million people in Indonesia visit different online marketplaces during the third quarter of 2020, as shown in Figure 1. With more than 200 million visitors with different satisfaction standards, it is needed for a company or firm to have a specific evaluation of their available services. Without a good service standard, it would be challenging to maintain customer loyalty and satisfaction (Sivadas & Baker-Prewitt, 2000). Dhiranty et al. (2017) studied customer trust in Tokopedia and found out that customer trust could influence their purchase intention. For example, low ratings mean less trust for the potential customer, reducing the intention to purchase.

Figure 1. Top 10 e-Commerce with highest visitor during Q3 2020 (<https://databoks.katadata.co.id/>)

In this research, we proposed a case study from a sole proprietorship (company) that imports Point of Sales (POS) Machines, call CV EYZ. POS Machine consists of Thermal Printer, Barcode Printer, Barcode Scanner, Cash Register, and accessories. The company sells its product via offline and online selling. The company started its business in 2010 when it started to offer screen protectors for phones and sold them across Indonesia. The company acquired many customers and became one of the biggest points of sales suppliers in Indonesia. In 2019, the owner tried to expand their business through the online marketplace. They tried various methods and still unable to increase the revenue gained from each marketplace. The owner saw some potential in online markets, especially during this pandemic season. COVID-19 Pandemic situation forces people to work from home, search for other jobs, or become online sellers. The products that CV XYZ sells are suitable for people who need their home business, small shops, or maybe small retail businesses. CV XYZ has 6 stores on 3 different online marketplaces (Shopee, Lazada, and Tokopedia).

The owner believed that after-sales service is one of the critical predictors, among other factors that influence customer satisfaction (Kurata & Nam, 2010). Furthermore, after-sales services can also be categorized as Service Quality, where the company will give a particular service to their buyers. Delivering a successful service can give a competitive advantage over other firms (Murali & Muralidharan, 2016). Therefore, the owner believe that it is important for CV XYZ to maintain a good service quality for improving customer satisfaction level.

This paper shares our lesson from a sole proprietorship in Indonesia that sells point of sales (POS) products on several online marketplaces to drive customer satisfaction higher through after-sales services. In the next section, we provided a literature review of this subject. Next, we outline an effort that an owner is setting to achieve 4- and 5-Stars rating as the theoretical foundation that supports his idea. We then develop several methodologies ranging from simple Statistics to a more sophisticated Markov Chain and Regression that we can use to measure his effort. Finally, based on our findings, we provide our discussions and recommendation for the business and further research.

## 1.1 Objectives

This paper aims to evaluate whether the effort and resources that are spent already in the after-sales service result in the positive movement for the Star rating from 3-Star (and lower) to 4-Star (and higher) and improve the Sales of online stores.

## 2. Literature Review

Star-rating (on a 5-point scale) has been the subject of debate for many years. For example, Breinlinger et al. (2019) argued that while simple five-star ratings for the online marketplace are good enough at identifying and weeding out

very low-quality products or suppliers, they do a poor job of separating good from great products or suppliers. They also provided several suggestions to remedy the situation. Klein et al. (2018) pointed out that reviews are heavily polarized with many extreme positive and negative. Thus, it has a dual-edge sword challenge to consumers. It could be a blessing to help other customers making an informed decision, but it usually represents the most extreme views. They suggested using both monetary and pro-social incentives to remedy these extremes and have a more balanced review.

Similarly, in 2010, Williams et al. released their sophisticated 5-Star scoring system developed using Statistics methodology for Centers for Medicare and Medicaid Services (CMMS) to rate nursing homes. Please be clear that CMMS, in this case, is a United States government agency that serves older people. However, in 2015, Konetzka et al. published a paper with criticism over that those 5-Star system. The debate on this subject continues until very recently, with CMMS planning to release its updated version.

Despite all of those debates, Askalidis and Malthouse (2016) can demonstrate that the number of reviews for a particular product serves as the electronic version of word of mouth commonly encountered in the marketing diffusion process. Using data from a specialty retailer, they demonstrated that the number of reviews could increase conversion rate as much as 270%. The function that they use to fit the data is the famous exponential learning curve. Furthermore, Maslowska et al. (2017) are also able to demonstrate there is a non-linear relationship between probability to purchase (as dependent variable) vs. average Star-Rating reviews (valence) and volume of reviews as independent variables using logistic regression with generalized additive models.

The above two research by Askalidis & Malthouse (2016) and Maslowks et al. (2017) inspire our 3rd hypothesis (see below). However, we did not have the luxury to have similar data since online marketplaces host our online stores. In addition to the above debate, Luca and Zerva (2015) provide a completely different perspective when analyzing Yelp reviews. Even though, not directly related to our research, the interesting finding in their research is related to the fake negative review due to competition. They pointed out that competition can indeed increase the number of the negative review.

### **3. Methods**

Given the obsession of the owner with the 5-Star rating, the relatively short duration of the after-sales service program, and the available data from the online marketplaces that we can collect, we collected the Star rating of CV XYZ online stores and compared them before and after. We formulated the following three hypotheses:

H1: Given the effort and resources spent already in the after-sales service, there should be some positive movement in the Star-rating, from 3-Star (and lower) to 4-Star (and higher).

H2: The after-sales services will help to improve the Sales of online stores.

H3: There is a positive correlation between Sales and Star-Rating counts.

For the 1st hypothesis, we collected the data from Shopee Axelpos (<https://shopee.co.id/axelpos>) and 5 other online stores that CV XYZ owns across 3 different online marketplaces. In this paper, we only use the Star rating data from Shopee Axelpos to illustrate our findings. Other online stores exhibit similar behavior. It is also important to point out that this Star rating system is for each product. However, we use them collectively as proxy data for the “after-sales service” program implemented since the program was implemented for all products. For the “before” after-sales service program, we believe we can take a simple average for the proportion since the program has been like that for an extended period, i.e., reach steady-state. We also compare the number to the Markov-Chain steady-state to validate our assumptions. However, given the short history of the data “after” the after-sales service program was implemented, we think it is more appropriate to model the Star rating as a Markov Chain. So, our first task is to estimate the transition probability and then calculate the stationary probability to see how the process behaves for the long run when it reaches a steady-state probability.

A Discrete-Time Markov Chain (DTMC) is a sequence of random variables with transition probability matrix  $P$  that represents probability from one state to the other; our 5-Star rating data very much resembles the DTMC, that is:

$$Pr(X_{n+1} = x_{n+1} | X_1 = x_1, X_2 = x_2, \dots, X_n = x_n) = Pr(X_{n+1} = x_{n+1} | X_n = x_n) \quad (1)$$

In our case, the state space  $S = \{s_3, s_4, s_5\}$  is the Star-rating where:  $s_3 = 3$ -Star (or less),  $s_4 = 4$ -Star, and  $s_5 = 5$ -Star respectively. This chain moves from one state to another, and the transition probability to move from  $s_i$  to  $s_j$  is given by  $p_{ij}$ . In this case, we assume that our after-sales services have an underlying time-homogeneous Markov Chain such as in (2) below:

$$\mathbf{P} = \begin{bmatrix} p_{33} & p_{34} & p_{35} \\ p_{43} & p_{44} & p_{45} \\ p_{53} & p_{54} & p_{55} \end{bmatrix} \quad (2)$$

In its simplest form, following Dent & Ballintine (1971), an unconstrained least square estimate for the transition probability is given by the following matrix multiplication (first proposed by Miller (1952) and subsequent correction from Goodman (1953):

$$\mathbf{P} = \mathbf{N}\mathbf{M}^T(\mathbf{M}\mathbf{M}^T)^{-1} \quad (3)$$

where  $\mathbf{M}$  is the matrix of observed proportions for observations 1 to  $n - 1$  ( $n$  is the total number of observations or time periods), and  $\mathbf{N}$  is the matrix of observed proportions 1 observation beyond  $\mathbf{M}$  (*i.e.*, observations 2 through  $n$ ).

Unfortunately, it is well known that the unconstrained least square estimate can produce negative probability and probability bigger than one. Numerous research papers (Madansky (1959), Telser (1963)) had been published to illustrate the challenge, as well as some proposed corrections in estimating the transition probability from aggregate data. One of the most highly cited topics in this topic is the book created by Lee et al. (1970) that proposed a quadratic programming formulation. There are also several other techniques as discussed in Dent & Ballintine (1971) to get a reasonable estimate. Unfortunately, each of them has its challenges. We tried to use it and encountered this problem when we applied some of this technique to the Star-Rating data that we have collected from CV XYZ. We obtained some result that does not make too much sense (unconstrained least-square produce negative and beyond unity probabilities, etc.).

Another way to fit the Markov Chain transition probability is by observing its sequence of events. There are 4 commonly used methods as outlined in Spedicato & Simorelli (2013), Spedicato et al. (2017): maximum likelihood, maximum likelihood with Laplace Smoothing, Bootstrap approach, and maximum a posteriori. We successfully used these techniques together with a traditional averaging observation to see if we could extract some useful information. The maximum likelihood of the transition probability  $p_{ij}$  (and also with Laplace smoothing  $\alpha$ ), its standard error  $SE_{ij}$ , and Confidence Interval are given by the equations (4.a), (4.b), (5), and (6) below:

$$\hat{p}_{ij}^{MLE} = \frac{n_{ij}}{\sum_{u=1}^k n_{iu}} \quad (4.a)$$

$$\hat{p}_{ij}^{LS} = \frac{(n_{ij} + \alpha)}{\sum_{u=1}^k (n_{iu} + \alpha)} \quad (4.b)$$

$$SE_{ij} = \frac{\hat{p}_{ij}^{MLE}}{\sqrt{n_{ij}}} \text{ or } SE_{ij} = \frac{\hat{p}_{ij}^{LS}}{\sqrt{n_{ij}}} \quad (5)$$

$$[LB, UB] = \left[ \hat{p}_{ij}^{MLE} - zscore(CL) \times \frac{\hat{p}_{ij}^{MLE}}{\sqrt{n_{ij}}}, \hat{p}_{ij}^{MLE} + zscore(CL) \times \frac{\hat{p}_{ij}^{MLE}}{\sqrt{n_{ij}}} \right] \quad (6)$$

In addition to the Star-Rating data, we also obtain the Sales data from 6 online stores that CV XYZ owns. For the 2nd hypothesis (H2), we compare the average daily sales before and after-sales service program is implemented to see whether it has a positive impact by using a very simple two-sample t-test with unequal variance. As we have discussed in the literature review, the 3rd hypothesis (H3) is inspired by the work of Askalidis and Malthouse (2016) as well as Maslowska et al. (2017). However, given that our data is at the aggregate level (not collected at the individual product level), we try to see the correlation between average daily Sales and Star Rating counts both on linear and exponential functions. In the next section, we discuss our findings in more detail using Shopee Axelos online store data.

## 4. Data Collection

The characteristics of data that we can collect are as follows:

- For the “before” (Prior) situation, it is about 1 month (March 14 – April 17, 2021) of daily data before the after-sales service program is implemented. There are 1369 data points during this period since several star ratings were posted daily.
- Similarly, the “after” (Post) situation also consists of about 1 month (May 16 – June 19, 2021) of daily data post the after-sales service program, and we can collect 1768 data points of Star Rating.

## 5. Results and Discussion

### 5.1 Analysis of H1

The basic statistics of our Star-Rating data looks like the following Table 1 (please note that we combine 1-Star and 2-Star into 3-Star since their counts are very marginal):

Table 1. The proportion star-rating relative to the “after-sales service” program

	≤ 3-Star	4-Star	5-Star
<b>Before</b>	21	124	1224
<b>After</b>	25	151	1592

	≤ 3-Star	4-Star	5-Star
<b>Before</b>	0.0153	0.0906	0.8941
<b>After</b>	0.0141	0.0854	0.9005

Notice that even though the proportion looks slightly better post the after-sales service program was implemented, the  $p$ -value of  $\chi^2$  ( $= 0.8412$ ) reveals that the distribution of Star rating for Before and After data are not very significant. Not quite satisfy with the above result, we use the Markov-chain package from Spedicato *et al.* (2017) that is available in R to estimate the transition probability and were able to obtain the following results in the Table 2.a., 2.b., and 3 for the transition probability matrix as well as its corresponding standard error:

Table 2. Transition probability and their corresponding SE before program implementation

p Before	≤ 3-Star	4-Star	5-Star
≤ 3-Star	0.04762	0.14286	0.80952
4-Star	0.01613	0.17742	0.80645
5-Star	0.01472	0.08095	0.90433

SE Before	≤ 3-Star	4-Star	5-Star
≤ 3-Star	0.04762	0.08248	0.19634
4-Star	0.01140	0.03783	0.08065
5-Star	0.00347	0.00814	0.02719

Table 3. Transition probability and their corresponding SE after program implementation

p After	≤ 3-Star	4-Star	5-Star
≤ 3-Star	0.129032	0.129032	0.741936
4-Star	0.021429	0.214286	0.764286
5-Star	0.015047	0.066458	0.918495

SE Before	≤ 3-Star	4-Star	5-Star
≤ 3-Star	0.06452	0.06452	0.15470
4-Star	0.01237	0.03912	0.07389
5-Star	0.00307	0.00645	0.02400

Table 4. Steady-state probability before vs. after system implementation

Rating	≤ 3-Star	4-Star	5-Star
<b>ss Prob Before</b>	0.015351	0.090643	0.894006

Rating	≤ 3-Star	4-Star	5-Star
<b>ss Prob After</b>	0.017554	0.079275	0.903171

Unfortunately, applying equation (6) to Tables 2 and 3, we can easily see no difference in terms of the Star Rating transition probability. Similarly, the  $p$ -value of  $\chi^2$  for the steady-state probability gives us 0.9995, which means the steady-state probabilities Before and After the after-sales service program are practically identical.

Hence, we have to conclude that there is insufficient evidence to reject the hypothesis that we obtain a higher Star rating due to the after-sales service program. The possible reason for this condition is that the implementation of this program is evaluated in 1 monthly data only; the program benefit is gained more internally for the company in tracking the progress of after-sales service so than to the customer. Anyway, before the program is implemented, the company already provided the after-sales service to the customer.

## 5.2 Analysis of H2

The very fundamental analysis on the sales is that we are comparing the average daily sales for the prior after-sales service program is implemented vs. post-after-sales service program. Therefore, our data for Shopee Axelpos is presented in the following Table 5 (other online marketplaces exhibit similar behavior, just at different scales):

Table 5. Average daily & St dev daily sales for prior vs. post after-sales service for Shopee Axelpos

	Average Sales/Day	StDev Sales/Day
<b>Before</b>	IDR 23,741,462.07	IDR 9,358,087.17
<b>After</b>	IDR 35,341,617.31	IDR 16,121,089.60

The  $p$ -value for the  $T$ -test is 0.0013. It clearly indicates that the daily Sales post-implementation of the after-sales service program has a great improvement, even though its standard deviation (and variance) is slightly higher. Based on the data so far, we can safely conclude that the investment in the after-sales service program produced an increase in average daily Sales for over IDR 11M. Combining the Sales of all 6 online stores, CV XYZ can see an increase on average daily Sales of around IDR 31M after implementing the after-sales service (with a  $p$ -value for the  $T$ -test = 0.0039) – a big clear payoff for the investment in the after-care service program. Table 6 summarizes the average daily sales and standard deviation for all 6 online stores combined.

Table 6. Average daily & St Dev daily Sales for prior vs. post after-sales service for all 6 online stores

	Average Sales/Day	StDev Sales/Day
<b>Total Before</b>	IDR 89,815,701.38	IDR 30,344,817.70
<b>Total After</b>	IDR 121,393,370.77	IDR 49,946,415.02

## 5.3 Analysis of H3

Hypotheses 3 is the area that we originally were skeptical about the finding in Maslowska et al. (2017). When we formulated our 3rd hypothesis, we thought there should be a positive correlation between the Sales and the numbers of 5-Star ratings – hence, our stated hypothesis above. We feel the owner of CV XYZ expectation is very reasonable, i.e., to expect and try to increase the number of 5-Star-rating continuously. Therefore, we calculate Pearson's correlation between sales and the log of the counts for 5-Star (as well as 4-Star and 5-Star ratings) before and after-sales service program implementation. To our (originally) surprise, we got the result shown in Table 7. The following table displays those results (again, the table below is only for Shopee Axelpos – other online stores exhibit similar behavior at a different scale).

Table 7. Correlation between Sales and Star-Rating counts (in logarithmic scale)

	$\rho(\text{Sales}, \text{Ln}(5\text{-Star}))$	$\rho(\text{Sales}, \text{Ln}(4\text{- or } 5\text{-Star}))$
<b>Before</b>	-0.3122	-0.3219
<b>After</b>	-0.8209	-0.8120

We use a logarithmic scale for the counts of Star rating for the same reason as Maslowska et al. (2017), i.e., to make data a bit normal (normalize skew data with outliers). From Table 7, we see there is a negative correlation between Sales and Star-rating counts. We are now convinced that too many 5-Star ratings could actually bring Sales down as

the old saying: “When it is too good to be true, it probably is.” Our finding indicates that it is possible, and the owner of CV XYZ needs to be very careful when driving the 5-Star rating up.

After our finding above, we also went back to conduct a literature review and found an interesting Mathematical explanation of this (now) famous advertising/marketing phenomenon of “too good to be true”, this time in various subjects. One of such paper is by Chapeau-Blondeau et.al. (2016). Moreover, it also turns out that several other researchers in a completely different subject, such as Baier et al. (2021), have discussed a similar topic.

## **6. Conclusion**

The above simple case study shows that improving the after-sales services program increases the average daily sales (statistically significant). Hence, it proves our 2nd hypothesis (H2) and motivates CV XYZ employees to improve further and measure the after-sales service program to improve the sales performance of the Online Division in CV XYZ. However, from this result, we encountered what has been alerted by Klen et al. (2018) and Breinlinger et al. (2019) regarding Star Rating. Our data also shows an extreme rating, in which users can compare the counts for  $\leq 3$ -Star vs. 5-Star and notice that the counts skew heavily toward 5-Star. Unfortunately, those 4-Star and 5-Star ratings do not provide us with any further inside their counts. Therefore, we failed to prove our 1st hypothesis (H1) by just looking into the number counts. Furthermore, we also encounter the “too good to be true” phenomenon between Sales data with those 5-Star ratings (as in H3).

Obviously, the failure to prove our first and third hypotheses suggests that we need to dig deeper into those 4-Star and 5-Star ratings, as previously suggested. For example, suppose CV XYZ wants to get a more realistic understanding of its customers. In that case, we recommend providing a monetary incentive (e.g., in terms of coupons for further purchase, etc.) for those reviewers to provide more detailed reviews. Otherwise, that 5-Star (and also 4-Star) rating serves as decorations. Therefore, we have investigated those 1 – 3 Star ratings since only a few of them and concluded that there is no fraud due to competition or other factors.

Similarly, under the assumption of the “too good to be true” phenomenon, it will be exciting to determine whether there is an optimal number of 5-Star ratings that certain companies will need to achieve in maximizing Sales. Finally, assuming that actual data can be collected, it is also interesting to see how the length of honest reviews correlates to the Sales of a particular product or general sales for an online store.

## Biographies

**Christopher Hanjaya** is an Undergraduate student from Petra Christian University. He studied in International Business Engineering Program, Industrial Engineering Department, Petra Christian University. As a student, he takes an opportunity to serve as a Motion and Time Study lab assistant. He has published a journal about Online Food Delivery Service during the Covid-19 pandemic using Structural Equation Modelling (SME), published by Multidisciplinary Digital Publishing Institute (MDPI). His research interest includes optimization, lean, scheduling, reliability, and responsiveness.

**Karina Agustin** is a lecturer in Industrial Engineering Department and serves as the vice head of the Industrial Engineering Department, Petra Christian University. Ms. Karina completed her Masters' study in Industrial Management at the National Taiwan University of Science and Technology (NTUST), Taiwan. Currently, she joins the Business Intelligence team to research Machine Learning and Data Mining. She has published a journal about a dynamic system model for government policies in overcoming the Covid 19 pandemic and other accredited national journals. In addition, she teaches Engineering Drawing, Engineering Mechanics, Data Mining, Business Analytics, and Smart Industry courses. Her research interest includes data mining and business intelligence.

**Hanijanto Soewandi** serves as Vice President at MicroStrategy Technology, a public software company (on Nasdaq) in Business Intelligence/Business Analytics. Mr. Soewandi received his doctoral and postgraduate education under the guidance of Drs. Salah Elmaghraby (NCSU) and Okitsugu Fujiwara (AIT). He has also received training research in Econometrics at Gadjah Mada University under the guidance of Dr. Daniel S. Hamermesh (UT Austin). In addition, he completed two undergraduate educations from Civil Engineering UK Petra and the Financial Management University of Surabaya at the same time. Prior to working in the industry, Mr. Soewandi used his time at university as a student, teaching assistant, permanent lecturer (University of Surabaya) and part-time (George Washington University), or researcher (AIT, NCSU) by making mathematical models, obtaining optimal solutions, making heuristic methods & providing error limits in the areas of production planning, inventory control, & scheduling in the food and telecommunications industries. With over 22 years of experience in MicroStrategy and specializing in in-memory technology for large-scale data, Mr. Soewandi actively provides consulting for BI implementation in international companies such as Citibank, Visa, UBS, Marriott, Fanatics, Facebook, Metro, ASOS, Rakuten, Pfizer, Genesys, Federal Reserve Board, etc. In addition, Mr. Soewandi also often gives seminars at various international conferences in Business Intelligence/Business Analytics and periodically serves as temporary lecturer in International Business Engineering Program, Petra Christian University.
