- Front matter, Copyright, List of contributors, Woodhead Publishing Series in Civil and Structural Engineering, Foreword
- 1 - Introduction to Handbook of Alkali-activated Cements, Mortars and Concretes, Pages 1-16, F. Pacheco-Torgal
  - [Abstract](#) | [PDF \(796 K\)](#)
- Part One: Chemistry, mix design and manufacture of alkali-activated, cement-based concrete binders
  - 2 - An overview of the chemistry of alkali-activated cement-based binders, Pages 19-47, I. Garcia-Lodeiro, A. Palomo, A. Fernández-Jiménez
    - [Abstract](#) | [PDF \(2114 K\)](#)
  - 3 - Crucial insights on the mix design of alkali-activated cement-based binders, Pages

This book provides an updated state-of-the-art review on new developments in alkali-activation. The main binder of concrete, Portland cement, represents almost 80% of the total CO<sub>2</sub> emissions of concrete which are about 6 to 7% of the Planet's total CO<sub>2</sub> emissions. This is particularly serious in the current context of climate change and it could get even worse because the demand for Portland cement is expected to increase by almost 200% by 2050 from 2010 levels, reaching 6000 million tons/year. Alkali-activated binders represent an alternative to Portland cement having higher durability and a lower CO<sub>2</sub> footprint.

- Reviews the chemistry, mix design, manufacture and properties of alkali-activated cement-based concrete binders
- Considers performance in adverse environmental conditions.
- Offers equal emphasis on the science behind the technology and its use in civil engineering.
